METROCROSS™

Are you the one in a million who can
 think in microseconds not minutes?

...If you are, Metrocross is the challenge that's been designed to inspire you. If you're not then you'd better fast improve your skill and co-ordination. A chequered floor riddled with pitholes, a barrage of obstacles that hinder your progress and no go areas that bring you to a standstill make this race against time increasingly impossible. But not everything is against you. Springboards are primed to catapult you forward and a speeding skateboard waits ready to hurtle you along that desperate rush to the finish line.

If you beat the clock the first time there's no guarantee you'll not be flattened at the next level.

Andersen's tales – Z88 behind latest details on Kaday and PC1 schedule

KRISTIAN Andersen, Commodore UK marketing chief, has dismissed as fairytales any speculation that the recent departure of MD Chris Kaday was demanded by European headquarters.

When *Popular Computing Weekly* asked him to clarify the circumstances surrounding Kaday's sudden resignation, Andersen said: "It was not dramatic, it was just one of those things. Chris just thought he'd prefer to go for other opportunities."

There has been speculation in the computer trade press that Kaday was asked to leave following concern expressed by Commodore president and chief executive Tom Rattigan about Commodore's UK prospects.

He was recently reported as saying that "the UK market's been a real problem for us over the past year". But Andersen denied that Kaday was part of any 'problem'.

"I don't think he (Rattigan) was addressing the performance of the UK subsidiary. On a time schedule, the UK and US markets were caught without new products, which wasn't the case in the rest of Europe."

Referring to the A500 and A2000 Amiga, he added: "But we've got the new products out now."

Andersen went on to dispel some of the mystery surrounding the PC1, the machine suddenly unveiled at the Hannover Fair last month, about which no-one, Kaday

included, seemed to know anything.

"The PC1 is a downgrade of our PC line. There seemed to be interest in a product like that, and so we built one and showed it in Hannover."

Andersen took the same dim view of the Commodore machine as Atari chief Jack Tramiel took of the Atari PC when that was launched at Hannover.

"I'm not very convinced that people will buy it – for one thing, MSDOS will bore the home computer market stupid. It's only a single drive machine, and you can't build it any further up," he said.

Andersen confirmed that when PC1 is launched, probably in "late summer", it will be available in the UK.

THE Z88, the portable computer announced by Sir Clive Sinclair at the *Which Computer?* show last February, has been delayed and is not due to go into production much before the end of the month.

Sir Clive said last week that the machine was in pre-production, and production was due to start in over a week.

That would make it the third week of April before production was due to start, with delivery not due to take place before the end of the month.

Of the peripherals to be sold with the Z88, the add-on modem is still awaiting BABT approval, and won't be ready for "six to eight weeks".

The machine has been the subject of controversy since it was advertised on a mail-order basis with no definite delivery date, although Sir Clive originally said that the first machines would be delivered to customers in April.

Digital Research starts PS/2 software deluge

DIGITAL Research has announced that it is producing the complete range of Gem presentation graphics applications for IBM's new Personal System/2.

Gem Draw Plus, *Gem Graph*, *Gem WordChart*, *Gem Collection*, *Gem Presentation Team* and *Gem Programmer's Toolkit* will be available on 3½ inch disc from June, at the same prices as the existing 5¼ inch format.

"These new computers with enhanced, high resolution graphics and a mouse option are ideally suited to operate with the Gem presentation graphics product line," said DR president and chief executive officer Dick Williams.

Gem applications will continue to be sold in the existing 5¼ inch format. Further information is available from Digital

Research (UK), Oxford House, Oxford Street, Newbury, Berkshire RG13 1JD. (0635) 35304.

Locoscript 2 delayed

LOCOMOTIVE Software has put back the release of *Locoscript 2*. It is now due for imminent release.

The enhanced version of Amstrad's bundled word processor was originally scheduled for release in March.

Howard Fisher of Locomotive said that the company was in the process of completing the manual, and digging out the few remaining bugs.

Asked why the long-awaited upgrade had been delayed, he said it wasn't down to any specific problem.

"I think it's just the general optimism within the software industry about release dates," he said.

Online jobcentre for programmers

BUDDING games programmers could do worse than put demos up on Commodore database Compunet, according to Compunet's Jane Firbank.

"Some kids started putting up demos, graphics and so on. The software houses started to pick up on this, because they're desperately short of programmers," she said.

Houses such as The Edge, Mirrorsoft, Elite and Melbourne House are all understood to have success with coders recruited as a result of seeing their work on

Compunet.

"Not only do software houses see your work, but because of all the communication going on on Compunet you're not going to get anybody signing somebody up on a rip-off deal," Firbank went on.

It's not only budding amateurs who can benefit from the service. Established coders such as Rob Hubbard, who wrote the music for *Knucklebusters* and *The Last V8* among many others, are known to use Compunet to get work and as a PR medium generally.

Pirates ahoy

HERE are two screen shots from the forthcoming Microprose offering, *Pirates* (see *Popular Computing Weekly*, 3-9 April).

No further details are avail-

able at the moment, but a Microprose spokeswoman said last week that it would be released some time after July 1st, the exact date still to be fixed.

Software Hotlines

IT'S usually rule number 27 of computer journalism to avoid tape magazines, so when *Jumpdisc* - a mag on a disc for the Amiga - was thrust under the nose, the serene consciousness momentarily quailed.

However, it turned out to be very good indeed, chock full of articles and Amiga Basic programs, best of which was a spoof spreadsheet thing called *Microsutra* (see above).

Imported from the States by **George Thompson Services**, there'll be one out per month, and for £8.50 (incl p&p) it's a bargain. Also from the same source, **GTS** will be putting out Amiga games for under a tenner later in the year. Interested parties write to Old Reigate Road, Betchworth, Surrey RH3 7DR, or ring 073 784 4675.

I see the crime figures are up again and no, we are not referring to the Mafia's profits, but the number of murder mysteries coming up to a computer near you soon.

There's *The Detective*, from the **Argus Software Press** stable, that puts you on the MacFungus case - bopping round the manor house (looking like an extra from an *Ultimate 64* game) trying to find clues as to whodunnit, which itself gets easier as the number of suspects diminishes with a frightening rapidity with stiffs mounting up ten to

the dozen. *Neighbourhood Watch* was never like this.

There's *Killed Until Dead* from **US Gold** about soon, of course - here you have to try and prevent the dirty deed before it happens, and *Murder on the Atlantic* from **Infogrammes** - and a Fergus McNeil send up of the *Great American Detective* called *The Big Sleeze* (out May, £9.95) - that's from **Piranha**. The software house that not only takes the shirt off your back, but then shreds you into little pieces.

Coo - **Psygnosis** is at it again, with two new games on the horizon for ST and Amiga. *Terrorpods* looks like an arcade strategy job, but out before that (at the Atari show) is *Barbarian*, an arcade adventure type thing. Hope to review that in the next issue.

Good grief, do you know that *Rock 'n' Wrestle* has sold over 100,000 copies in the States, under the name *Bob 'n' Wrestle*. I guess it's only fair if you think about it - they send us junk food, and we send them... well... just junk I suppose.

Finally, seeing as there's a picture of one of *Imagine's* up and coming releases below, *Game Over*, better say something about it. Errr... don't the graphics look pretty?

John Cook

Microsoft OS/2 details

MICROSOFT has announced its new hardware and software developments to tie in with the launch of IBM Personal System/2.

Chief among these is Microsoft Operating System/2 (MS OS/2), its proprietary version of the new operating system, developed in conjunction with IBM for the new IBM Personal System/2 PCs. This is a multitasking, single-user OS for 80286 and 80386 based PCs.

"Microsoft Operating System/2 provides the foundation for the next phase of exciting growth in the personal computer industry," said Microsoft chairman Bill Gates.

"MS OS/2 will be the platform upon which the next 1000 exciting personal computer applications software products will be built."

GATES: growth

Microsoft has also announced MS-DOS version 3.3 for IBM PCs and compatibles, the Windows presentation manager version 2.0, and a new mouse for PS/2 machines.

Microsoft anticipates that MS OS/2 will be generally available in 1988.

Free legal advice for Amstrad users

AMSTRAD Users' club members are now able to obtain free legal advice thanks to a deal with IRPC Legal Services.

On payment of the club membership fee, each member will receive a card with relevant telephone and membership numbers.

He or she will then be entitled to round-the-clock legal advice from IRPC's advisers on subjects from motoring offences to matrimonial problems and personal injury.

Why did IRPC decide to offer this service to Amstrad users' clubs in particular?

"We market this product to groups en masse," said a spokeswoman for IRPC.

"It's quite an attractive benefit that could be offered with membership."

Details should be available from local Amstrad users' clubs, or direct from John Mullin, IRPC Legal & Personal Insurance Services Ltd, Stockwell House, New Buildings, Hinckley, Leicestershire LE10 1HW, (0455) 30741.

Starglider talks

RAINBIRD Software's publisher Paul Hibbard confirmed last week that the company is planning to sell the rights to *Starglider*, the acclaimed shoot 'em up, to an arcade company.

"Discussions are taking place with a number of people," he said, although he was unable to say who exactly was involved. More details are expected to emerge shortly.

Amiga aid

AN ST emulator with a difference has been announced by Ahmed Innovations and Research.

Stimulator is an emulator for the Amiga, which runs as an Amiga task. Multiple copies can be run to emulate an ST in each window, and AIR director Hassan Ahmed claims, Gem programs for the ST make full use of the blitter chips when run on the Amiga.

But the interesting part is that AIR are asking for an extra cheque for £5 to be sent with each order. The cheque must be payable to one of the following charities: Imperial Cancer Research; Terence Higgins Trust; British Diabetic Association; Mencap; Childline; Oxfam Ethiopian Fund.

AIR says that "anyone sending an order without a cheque to a charity will be refused".

Stimulator is available price £15 from AIR Ltd, 145 Malden Way, New Malden, Surrey KT3 5QX, 01-949 4442.

DISC 12.95

The Greenock Effect

John Brissenden assesses the impact of IBM Personal System/2

WHAT'S all the fuss about? One Thursday afternoon the best part of a hundred reporters come blinking out of a press conference in the wilds of Scotland and file stories which make Greenock sound like another Lourdes.

Industry 'pundits' have hailed the launch of the IBM Personal System/2 as a watershed in personal computing. Yet ironically it is of more immediate importance to the corporate user.

So why is *Popular Computing Weekly* jumping on the bandwagon? Why does IBM's new strategy for the 1990s, providing links between PCs, minicomputers and mainframes, bear the slightest relevance to an ST or Amiga user, much less a Spectrum owner?

The basic reason is that IBM, fish in a pond wise, is like a killer whale in a bath. Commentators have pointed to the fact that when the first range of IBM PCs were launched five years ago, other manufacturers viewed the run-of-the-mill technology with ridicule.

But that changed when these "Incredibly Boring Machines" became the Ford Cortina of personal computing. They might not be original, and were certainly overpriced, but they were IBMs, they did the job, and they sold in the millions.

So while other manufacturers of software and hardware, corporate users and *Popular* readers might shrug off Personal System/2 as not affecting them, the point is that when fish the size of IBM decide to make a move, the waves affect us all.

This effect appears in several ways. Firstly, the technological innovations of PS/2 will dictate a new industry standard. In the old days, before April 2, that just meant 'compatibility'.

But now, there's a new built-in graphics standard to adhere to. There are machines constructed using Surface Mounted Tech-

nology. That means more smaller, powerful, faster, cheaper, safer and more reliable (according to IBM) machines. And there's the new architecture, MicroChannel.

This has the effect of making the PC more like a minicomputer, moving more information more quickly around the inside of the machine.

The result of that is to make it more difficult, but not impossible, for other manufacturers to reproduce IBM's technology. At the launch, IBM UK chief executive Tony Cleaver told reporters:

"Innovation of the sort you see in these products is expensive and we believe we have a right to ensure that our ideas are not handed on a plate to our competitors."

What that means is that you won't see a Compaq Personal Clone/2 coming out, at least not for a year or two. It also means, however, that PS/2 technology, and the subsequent changes, eg, the move to 3½ inch discs, will definitely spread to other areas of the industry. In the ongoing move to cheaper and more sophisticated machines, PS/2 represents a quantum jump.

Akhter is one company which has beaten IBM to the punch on this point. Its PC,

launched last month, was just ahead of the field in using 3½ inch discs. How does its OEM divisional manager Andrew Seal view the advent of PS/2?

"We're very pleased. We believe the 3½ inch format is the right technology for the future, and we're pleased that IBM thinks so too, because after all, it is the world leader."

"It won't impact on our business, in fact it will do the opposite, by breathing life into the PC field, and encouraging stability in the business."

As some industry figures have pointed out, PS/2 is intended as part of a system, and is therefore quite clearly aimed at corporate users' DP departments – not individual users within or without corporate sites.

IBM is thus leaving clone manufacturers to fight it out among themselves. The launch of PS/2 can be seen as an exponential growth in a market that is already growing and fragmenting at an incredible rate.

Peter Bayley of Compaq, Bob Garrett of Olivetti and Alan Sugar of Amstrad are all on record as saying that PS/2 will not directly affect their sales or strategy for some considerable time to come. Nor should it.

"The market that has been set up by IBM in terms of

AT/XT compatible machines is now the mass market," said Geoff Pick, senior sales executive of AMT.

"What IBM does won't affect that mass market."

In turn, the Amstrad PC, for one, has uncovered a new market of home and small business users whose needs are quite different from the OA manager who needs fifty machines, with multitasking, LAN (local area network) capability or whatever.

So while that area of the market may well be influenced by aspects of PS/2 technology and software, on another level the difference between the various sectors of the micro market will become more marked.

The fragmentation that has been going on for the best part of a decade will be accelerated by the IBM announcement. But at the moment it is difficult to tell how this will manifest itself in home and small business machines.

But Greenock will make another positive contribution. What has been remarked upon little is the competitive pricing of the new machines. Model 30 starts from £1,300, and the 286 machines start from under £3,000, including a 20MB hard disc.

Definitely not Sugar melting prices – but for the corporate market at which they are aimed, these represent an attempt by IBM to compete on all levels.

Indeed the major complaint at the moment seems to be the "long lead times" – industry-speak for intolerable delays between announcement and availability. This applies to the machines themselves and, just as importantly, Operating System/2, which won't be with dealers until 1988.

For that reason above all, it will be some time before the full impact of PS/2 is clear. But when it does become clear, PS/2 will have an effect far beyond its 'initial market'.

NOW GAMES 4

AS
SEEN ON TV

VIRGIN GAMES proudly presents NOW GAMES 4! No dedicated games player can afford to miss this bumper pack. There are 5 full priced hits on one cassette, each chart-topping game works out at a budget game price.

Leading the way is the incredible "DAN DARE - PILOT OF THE FUTURE" from Virgin. There's the hit game of everyone's favourite film "BACK TO THE FUTURE" and a chance to crack systems with "HACKER", both from Activision. "MISSION OMEGA" from Mind Games requires strategic thinking against the clock and Jonah Barrington says "JONAH BARRINGTON'S SQUASH" is so realistic it may even help improve your game. This is a first for Amstrad owners as this has never been released before!

AVAILABLE FROM COMMODORE 64/128, SPECTRUM 48/128 AND AMSTRAD CPC computers, on cassette for £9.95.

Now Games 4 is available from all good software retailers or directly from Virgin Games with this coupon.

You can get exceptional prices on other NOWS in this great series and the more you buy, the more you save!

NOW GAMES Spectrum 48/128 and Commodore 64/128 • Featuring: *Lords of Midnight* (Beyond), *Strangeloop* and *Falcon Patrol II* (Virgin Games), *Pyramenana* (Mikro-Ges), *Arabian Nights* (Interceptor), *Brian Bloodaxe* (The Edge).

NOW GAMES 2 Spectrum 48/128 and Commodore 64/128 • Featuring: *Airwolf* (Elite), *Chuckie Egg 2* (Artif), *Tie No Hog* (Gargoyle), *Cauldron* (Pulse Software), *World Cup* (Artic).

NOW GAMES 3 Spectrum 48/128, Commodore 64/128 and Amstrad CPC • Featuring: *Wick Fieldo Plays the Oxy* (Mind Games), *Seremony* (Virgin Games), *Codename Mat II* and *View to a Kill* (Domark), *Everyone's a Wally* (Mikro-Ges).

Please circle the software you require. Send this coupon to VIRGIN GAMES LTD, 24 VERNON ROAD, PORTBELLE ROAD, LONDON W11 2PX. Please mark cheques and postal orders payable to VIRGIN GAMES LTD. Please do not post coins or money.

MSX goes monthly

I wondered if you might mention our MSX user group, as judging by your letters page a good many MSX users read your publication.

We are a non-profit making group, with members in many countries and all continents.

We publish a monthly newsletter, usually five or six pages of news, help pages, new MSX software releases, penpals (many abroad) and a few reviews.

Our current newsletter lists no less than 47 new software titles in the last month, not bad for a dead format.

Anyone wishing to contact us should write to David Webb at 11 Ayscough Avenue, Spalding, Lincs.

Thank you for remembering us MSX users.

Keith Neal
MSX Link publicity officer

Flight that's fancy

I especially enjoy flight simulators, and I found the review of Sub-Logic's *Flight Simulator* (March 6) very interesting.

My question is, if I buy an Amstrad PC1512 for my business, will I be able to run flight simulators as good as Sub-Logic's on it?

At present, we have a 48K Spectrum, which we use mainly for games. The best flight simulation we have is

undoubtedly *Tomahawk* by D K Marshall of Digital Integration. Do you know if the company has any plans for another one like this?

John Martin
Nicosia, Cyprus
Sub-Logic's *Flight Simulator* is available for PC compatibles, but published by Microsoft. It has long been regarded as a standard for everyone else to follow.

Digital Integration has a new flight simulation planned for release this autumn. The program will be based on flying a General Dynamics' F16 Falcon Fighter, and is being developed for both the Spectrum and PC compatibles (also ST, C64 and CPCs).

Looking for a deal

Back in *Popular*, November 13, your News Desk reported Amstrad CF2 disc prices had been reduced to £2.99.

Since then I have been to all the computer shops and high street chains in Leeds who stock and sell the discs only to be met with blank stares and "Our discs are £4.99".

I have even launched forth from Lave in my trusty Cobra to scout the galaxies but still to no avail.

I now turn to you, can you help me find some of these mythical beasts?

S Hazlegrave
Leeds

Off the top of our heads, Pinner Wordpro of Dawlish Drive, Pinner, Middx. and Computers by Post (credit card hotline no: 01-760 0014) are both selling ten-packs of CF2 discs at £2.99. Try shopping around a bit more!

Trouble and time

I ordered the *Wordfinder Microdrive Spectrum 128* from WD Software, Jersey, on November 8 1986. Since I had not received my order by the first week in December, I phoned WD to find out the cause of the delay. The gentleman at WD told me there had been a shortage of microdrives, but this had since eased and I would be receiving my order within the next few days.

It was now December 11 and still no sign of the order, so I wrote to my bank and requested them to stop payment of my cheque. I again phoned WD to inform them of my actions, and their representative (the same voice as previously) expressed deep regret at my action in cancelling the cheque and suggested I may have acted a little hastily. He gave the same excuse as before (microdrive shortage) and again promised delivery within the next few days.

It had now become a point of honour to obtain this utility, therefore I told WD I would send another cheque and a

covering letter, both dated December 11 1986. My name was again taken and I was informed by the 'voice' that he would look out for my order.

Santa came and went but still no sign of my microdrive. I phoned on January 26 1987, was given the microdrive shortage excuse, and the empty promise of quick delivery. I phoned again in mid February - the same excuse and promise. At the date of this letter, I have still not received my order.

If I total the cost of the bank charge and the phone calls from Scotland to the Channel Islands, I find that I have paid for a program I haven't got, so I would suggest to your readers that if my treatment by WD is used as a criterion, I should think twice before ordering anything from them.

P Groomer

Ataris in Norway

I'm sorry to inform those of you that replied to my letter in *Popular*, March 6, that our newsletter is written in Norwegian, and will therefore be of no use unless you are Scandinavian. Due to the enormous amount of replies we are unable to answer them all individually.

Kristian Rosenvold
Atari ST user group of Norway

Puzzle

Puzzle No 254

Professor Otto Hex was showing his young grandson the following alphametic:

$$\begin{array}{r} \text{OTTO} \times \\ \quad \quad \quad \text{I} \\ \hline \text{STOP} \end{array}$$

Each of the letters, he explained, represented a digit. By substituting digits for letters, the same digit for the same letter wherever it occurred, the original multiplication could be found.

Can you find the correct substitution?

Solution to Puzzle No 249

The most frequently occurring score is 38, which is likely to occur, on average, 1842 times out of 46656. This represents a probability of 0.03948 (approx). In practical terms a score of 38 would occur once every 25 throws.

The program tackles the problem by computing each of the 46656 possible throws, and adding up the score so obtained. A running total is kept of the frequency of each score and this is examined at the end of the program to determine the leading total.

In this program, the array D(6) is used to hold the scores for each of the six faces of the dice. This is read from the data lines at the end of the listing. The second array T(78) is used to keep the running total of the scores obtained. The actual scores will be in the range 12 to 78 (ie, six 2s to six 13s). As each value is scored that unit of the array is incremented by one at line 230 of the program.

Once all combinations of throw are tested, the T() array is scanned finally to find the highest value contained. This represents the number of times that particular score has occurred, and the score itself is given by the value of the subscript (N).

Winner of Puzzle 249

This week's winner is Mike Owen, of Henley-on-Thames, Oxon, who will receive £10.

Rules

The closing date for Puzzle 254 is May 7. Answers should include a program listing if possible.

In for the Swoop

With the Micro Power game *Swoop*, I have noticed that when the joystick option is chosen, the joystick works back to front. This is easily remedied by using the joystick upside-down.

The problem comes because I have just bought a joystick where it is not easy to use backwards. I was originally using a very old model, and I am wondering if the fault lies with my joystick, my BBC B, or the program itself.

Paul Howlett
Runcorn

No Swoop experts here. Can anyone explain?

The ST magazine that STIX

I thought readers of your magazine might be interested to know of the existence of the Sixteen-Thirty two' Information Exchange (STIX), a quarterly non-profit making magazine for the ST series.

As well as the usual reviews of professional and public domain software, articles and fiction, it has many pages of readers' hints, tips and general comments on all aspects of ST computing.

Enthusiasts can send in up to one page of A4 information, and we will print it as it stands (as long as it isn't offensive) free of charge.

STIX costs £1 per issue from STIX magazine, c/o 72 Main Street, Osgathorpe, Leics LE12 9TA.

Jason Kingsley
Oxford

CPC 6128 SOS

I use *Protext/Promerge* on a CPC 6128, printing with a DMP 2000. This is a reasonably low cost set-up that performs brilliantly, and the results look better to me than with a PCW - except that the NLQ character set of the DMP 2000 is rather finky [sic]. The 'i' and the 'd', for instance, seem to come from some other, smaller, size of print

"Once upon a time there was a company called Commodore UK"

altogether. So does the 'i'. Neat enough, but not the best. There seems no technical reason, only poor graphic design.

Is there an alternative NLQ set available? The font packages I have seen advertised seem to assume that what you want is some strange or grotesque results - but all I want is a better set of NLQ characters. Best would be a replacement Rom for the printer (obviously, really best would be a laser printer or some hot-shot 24 pin job but I'm trying to be realistic here).

Can anybody out there help?

Myth breaking by Atari

I would like to reply to the letter by Mark Annetts in *Popular*, March 20.

Firstly, let me correct a few myths. Atari UK does intend to release a 65XE machine, but without a keyboard, which will make it a games machine at £89.99. For an additional £40 you will be able to buy a keyboard, tape recorder and a light gun. This turns the machine into a 65XE computer.

This market play makes a lot of sense. The 8-bit range of Atari micros are all compatible, which creates a readily available user base of 350,000. A fair amount of software is presently available for the 8-bit range and the computers already have a

Avoiding the menace

In Game Two of the Readers vs *Colossus* chess tournament, the Readers, playing white, chose to recapture with the knight at move 15, not the queen, maintaining pressure on d6 and avoiding black's threats: d7-b5.

Colossus has replied by moving its rook to c6, preparing to double on the c-file.

either address by Monday, April 27. As this is a double issue, you have a longer time than normal to send your votes in.

The move which gets the most votes will be entered into the game. Results and *Colossus's* response will be published in the May 8 issue.

Make the vote swing

What do you think the Readers team should do now? Send your suggested Readers move to either Inter-Mediate (*Popular Chess*), Freeport, Sawbridgeworth, Herts CM21 9YA (you do not need to use a stamp with this address), or *Popular Chess*, Unit 2, The Maltings, Sawbridgeworth, Herts CM21 0PG (with a stamp).

Please note that if you use Freeport, your entries must be posted promptly - Freeport is slower than paid-for mail. All entries must reach

Prizes

A British Museum reproduction Arran chess set will go to the person suggesting the most accepted moves at the end of the game. Five copies of *Colossus Chess 4* (available for most popular micros) will go to the most consistent entrants.

In our next issue, dated May 1, we return to Game One, where the Readers are playing black.

Game Two

cartridge port.

Considering the Atari 800 was introduced nine years ago, it was way ahead of its time. It is still the most sophisticated 8-bit micro on the market and has never reached a quarter of its capabilities.

Its graphics and sound are superior to the Commodore 64 because of its three custom chips, Antic, GTIA and Pokey, which are 8-bit versions of the Commodore Amiga's Denise, Portia and Agnus (both sets designed by the same person). This makes the Atari 8-bit range superior to the 7800 Pro System and should cut Atari's production costs.

The Atari 800XL (8-bit) range can display up to 256 colours simultaneously on

screen using machine code, the custom chips speed up the 6502 processor's operations and greatly enhance the graphic capabilities.

My final word is well done, Atari. You should do well if software is made available and prices kept low.

W Murray
Bristol

We're sorry but *Popular Computing Weekly* cannot guarantee to reply to all letters requesting a personal answer. It helps us enormously if readers are prepared to have general queries answered on these pages, so, if possible, please do not send SAEs.

Know your rights – and make the best of them

Excuse me. I bought this here last week. When I got it home it would not work."

"Well we have had no problems with that product before, something must have happened to it after you bought it. Have you fiddled with it?"

When you buy something in a shop you probably do not realise that you have entered into a contract with the owner of the shop (usually a company). The contract has certain special conditions implied in it which Parliament has put into black and white in the Sale of Goods Act 1979 (and for goods and services in another Act). Credit purchases have other aspects not covered in this article.

The conditions implied in a sale of goods can be very simply described.

Description

If you buy a cassette or disc which has on the label, or the wrapping, something which says it contains software, or a particular piece of software, then, **in order that the description should be correct**, the cassette or disc must contain that program. Otherwise you would risk buying a blank disc for the price of one with software on it!

Quality

The goods you buy should be of "merchandise quality". That means if they are supposed to be new they should look new. They should also be in working order and good condition when you buy

them, unless you knew of any defect beforehand.

Fit for purpose

If you get home and you find that the printer you have just bought, which was described in the shop as a printer which worked with your kind of computer, or the piece of software that you use, **and it does not work with them**, then the printer is not "fit for the purpose".

Even better, say the box does not say anything on it about what it works with and what you need to connect it up (which is all too often the case). If the assistant in the shop tells you that it works with whatever, then, **if it does not**, and you clearly relied on the assistant's skill and judgement, you should be able to return the goods and ask for your money back.

No right to a replacement

Many shops offer to replace faulty or damaged goods if you return them. You may even think that shops have to offer to do this. Not so. If you **return the goods quickly**, then you are saying, "I have not accepted these, they don't satisfy the implied term(s), I am rescinding my contract with you and I claim the amount I have lost – the price I paid – from you."

You never knew what a lot you were saying in the eyes of the law? Well, that is the reason why you are only entitled to ask for your money back, because when

"The law cannot help you to stand up for your rights, which means you have to stick to your guns if you feel you are in the right"

you buy something the shop does not promise that it will have another one to replace it. What if it runs out and cannot replace yours? So you see why the law could not imply a right to replacement.

But how would you deal with the situation at the beginning of this article? The law cannot help you to stand up for your rights, which means you have to stick to your guns if you feel you are in the right. Remember that a returned item is a lot more hassle for most shops than a replacement – somebody senior will have to authorise paying you back "out of the till" – and it's an old trick to throw the blame back.

Psychology is going to be more useful than knowledge of the law to start with: do not go into the shop and start by banging your fist on the counter and demanding your rights. Do it quietly, ask to see the manager, explain what has happened, but not necessarily in front of other customers, hear them out, then decide whether or not you will have to "get tough".

To make sure your case is sound you must always act quickly. If you do not, the shop may be able to say that you "accepted" the problem and therefore you have to keep the goods (although you may be entitled to some compensation). Whatever you do, don't try to fix faulty goods, as that in itself can amount to accepting them.

If the shop assistant offers to return the product to the manufacturer, don't let them if you only just bought it.

If you do, say that you reserve your rights to ask for your money back and reject the goods if they are not repaired reasonably quickly. Your contract is with the shop and not with the manufacturer. It's up to them to sort out the problem with the manufacturer.

If goods break down after a period of use, it depends on the circumstances

Most people have a vague idea of their consumer rights, but how many know exactly what they are entitled to, if, say, software turns out to be faulty, or the product turns out to be unsuitable for your needs, or the hardware doesn't match the description on the box? And what safeguards can you take when buying products on mail order?

Here, John Mawhood, a solicitor, attempts to explain exactly what your rights as a consumer are, and how the law can protect you.

"To make sure your case is sound, you must always act quickly. Otherwise, the shop may be able to say that you have 'accepted' the problem"

who you should look to: if there is a breach of the implied terms mentioned try the shop, if not, you may have the benefit of a guarantee, so try the manufacturer.

Remember that it always helps to put something in writing at the time and keep a copy of your letter. It can avoid confusion and disagreements about what has been said later.

Buying on mail order

In the back of almost every computer magazine you can find dozens of ads for mail order companies where, if you have a powerful enough magnifying glass, you can choose between the most popular titles of the moment and any number of peripherals and consumables for your computer. But how can you order them? In most cases they expect you to write with your order and a cheque.

In the vast majority of cases, there will be no problems. Most mail order companies are responsible, well-run organisations.

However, the computer industry has had at least its fair share of tales of woe; orders not arriving despite the fact that the cheque has been cashed; companies ceasing trading while your order is still unfulfilled.

If a company ceases trading — and this applies not only to mail order firms — owing you money, and you have managed to notify it of this, you will probably get a letter from the receiver appointed by a bank to wind up the company, asking you to notify them of the amount you claim.

Because you gave the company money when they cashed your cheque you were in "credit" with them so you are called a "creditor". But as a "mere" customer (in legal jargon you are an "unsecured creditor", unlike the bank who will have obtained "security" from

the company before letting them run an overdraft) your claim ranks very low in the list of creditors. Usually after the Inland Revenue, Customs and Excise, the bank and the trade creditors have been paid off (and that is not guaranteed) there is nothing left to pay off your claim, and there may be hundreds like you.

Recent proposals made to the government that customers' claims should be treated like secured creditors' have been ignored in the new legislation on companies that "go bust".

Unfortunately the problem for anyone who orders goods by mail is that, whilst advertisements in a national newspaper should be covered by their Mail Order Protection Scheme (MOPS for short), it is only the national newspapers and the very large publishing corporations which are members of MOPS, simply because of the expense of joining.

However, there are several steps that you can take when ordering goods, which may help avoid possible pitfalls.

- 1) **Pay by credit card**, if possible, for any order over £100. If anything goes wrong, you may be able to make the credit card company carry the loss.
- 2) **Cross cheques** "Account Payee Only". Your cheque can't then be cashed by the wrong person whether accidentally or on purpose.
- 3) **Post recorded delivery or registered post** anything you could not afford to have go astray (including a cheque if it is for more than a few

pounds).

4) Keep a copy of:

Your order. Who to, what for, for how much, when sent.

Any letter.

A note of any phone conversation. Who, when, what said.

(Where possible keep a photocopy, otherwise a signed note of the details.)

- 5) **Cancel your order properly.** If you have not received a satisfactory explanation of why your goods have not been sent after a reasonable time (at least 28 days) write to the company giving it 14 days to deliver your order and say that if it is not delivered in time your order is cancelled and you want your money refunded.

Then, if it does not arrive, either write to your bank to stop the cheque if possible, or write to the credit card company cancelling the payment if it was for over £100.

- 6) **If the product arrives, but goes wrong**, return the defective goods (recorded delivery or registered post) within seven days and ask for your money back (including postage).

Because it is impossible to cover every aspect of this area of the law in a short general article, I am sorry that I cannot accept any responsibility for matters arising out of it. If you have a particular problem, ask your local consumer organisation or Citizens Advice Bureau for advice.

SOFTWARE CENTRE

GFA Basic is fast. Very fast, in fact. So, you could reasonably demand to know why, after paying £60 for the Basic, you should fork out the same again for a compiler. The answer is that certain commands tend to lag behind the others in the speed department.

Some of these commands gain quite some benefit from being compiled, the *Repeat-Until* loops, which are normally slower than *For-Next* loops, being a case in point.

The other advantages of compiling your GFA Basic program include making it secure against listing by the uninvited, and also the fact that you now don't need any other piece of software, the interpreter or run time module, to execute your file. Indeed, now you can place your executable machine code file in an Auto folder and have the program automatically load and run when the ST is switched on or reset.

To get started with the compiler simply load it up and, ignoring the options which are set to a default for maximum efficiency anyway, click on the *Compile* bar. You are presented with an item selector window and prompt-

Fastest Basic in the test

Ever wondered if there was anything faster than GFA Basic? Duncan Evans says there is – the GFA Basic Compiler

various guidelines have to be followed to avoid disaster. The first point to note is that your Basic program must have been saved with *Save*, not *SaveAs*, *List*, or *PSave*. Not much of a limitation there, I'm sure you'll agree. Next, the Basic commands which cannot be compiled are *List*, *LList*, *Tron*, *Troff*, *Deflist*, *Save*, *Load*, *Psave*, *Stop* and *Cont*. So don't use them!

The only minor problem here would be one program loading another, possibly the main program. However, with a little foresight this should prove no great hardship as you can use *Bload*, and other byte related loading instructions, to load machine code

files or blocks of data anyway.

There are a couple of commands which behave slightly differently than they do in Basic, so care must be taken if using them in your own programs. These include *Fileselect*, *Chain*, *Resume* and *Resume Next*.

Back at the compiler menu you are given the option of selecting how your program will react when *Ctrl-Shift-Alt*, the standard break combination in GFA Basic, is pressed. These range from not responding at all, checking only on certain loops, to checking all the time. The penalty for checking all the time is speed and memory usage, with a

decrease in the former and an increase in the latter.

Other options on the compiler menu offer the trapping (or not) of overflow errors when using integer arithmetic, activating error messages or defaulting to error numbers only, and finally, dealing with the bombs that are the result of a system error.

Using any of these options makes the compiled program that bit longer in the end. Still, if you're absolutely convinced that your Basic program is error free then you won't need them, will you?

After compiling a program the resulting machine code file is always longer than the original. For example, one of our 1K GFA Basic programs compiled into 7K of machine code. Trial and error will be the only recourse for determining how much larger a compiled program is going to be but for much longer programs 10K or 12K would be the order of the day. Not, I hasten to point out, seven times the original.

Returning to the speed issue, compiling the PCW benchmark results in an average of 0.6 seconds as opposed to the 1.4 uncompiled. Check out Table One for a blow by blow comparison. In

Bench Test	GFA Basic	Compiled
1	0-11	0-05
2	0-4	0-1
3	1-025	0-22
4	1-01	0-28
5	1-09	0-303
6	1-765	0-61
7	2-845	0-985
8	2-945	2-185
Average:	1-40	0-59

"Other options on the compiler menu offer the trapping (or not) of overflow errors when using integer arithmetic, activating error messages or defaulting to error numbers only"

ed for the Basic file to compile.

Once selected the GFA Compiler springs into action, compiling away until you are asked for the filename for the resulting machine code program. Thoughtfully the Basic filename originally selected is offered as that filename, but with the *BAS* extender replaced by a *Prg*. Just press *Return* and the program is saved on disc, ready to be executed.

Compiling is usually not worry-free, as some commands are not acceptable and

The Compiler's only menu

general, the slower GFA commands are the ones which gain the most from being compiled.

To conclude, buying GFA's Compiler may double your outlay on the language but it is most certainly worth it. Glentop has come up with a quality product again.

Product GFA Basic Compiler Micro Atari ST **Price** £59.95 **Supplier** Glentop Press, Standfast House, Bath Place, High Street, Barnet, Herts EN5 5XE.

VISIT MIRRORSOFT AT THE ATARI SHOW

Stand No 72 at the Novotel, 24th, 25th and 26th April

As well as two of the most realistic and exciting flight simulators yet – STRIKE FORCE HARRIER (ST) and SPITFIRE 40(XL/XE)

– Mirrorsoft will be showing the first of the Cinemaware titles from Mindscape for

the ST; SDI features space combat in an exciting flight simulator, combined with romance, intrigue, and heart-stopping action. Also, BALANCE OF POWER, a strategy game of geopolitics in the nuclear age and from Spectrum Holobyte, GATO, a

submarine simulation centred around the control room of a World War II combat submarine.

Come and see ART DIRECTOR – an exciting graphics package for the ST which allows you to

create designs, storyboards or complex professional presentations;

FILM DIRECTOR – for home movie-making and professional animation

studios, it allows you to

create, assemble and control on screen every element of animated graphics.

Art Director can be used in conjunction with FLEET STREET PUBLISHER which

can also be seen in action on the Mirrorsoft stand. Fleet Street desktop publishing

software allows you to combine text and graphics to create professional and attractively presented printed material.

COME AND SEE THE RANGE OF MIRRORSOFT TITLES AT THE ATARI SHOW.
FROM STRIKE FORCE HARRIER TO FLEET STREET PUBLISHER AND MAYBE MORE...

not be the *Advanced Art Studio*, but has all the usual options one expects of graphics packages these days, or select pictures from the almost dauntingly extensive library.

The library comprises 26 screens with three to four pictures on each, so you'll probably never get round to using all of them. However, once pulled out of the library on to your data disc, they can then be enlarged, contracted, 'filled' in a wide variety of patterns (most of which look like obscure Scottish tartans), scaled, rotated, etc., to fit your requirements. These can also be saved to disc, and again you should have a pretty good idea of where they will go on the final page, and what size and proportion it will be, to avoid grief and tears when you come to place it on the layout.

Creating the page

A lot of the mechanics of collecting, writing and saving text, drawing, manipulating and storing the graphics are downright fiddly, and I would have liked, as a blanket facility throughout the program, a 'cancel that last menu item just selected, I pressed that key by mistake' option.

It therefore comes as something of a relief that the final laying-out stage can be straightforward, so long as your planning was meticulous.

You need to place plenty of 'barriers' on the page to ensure that your text won't cheerfully scroll into your headline, or illustration space, for example, but once your text all fits and your carefully designed graphics don't turn out to look like pin pricks in acres of space (I'm skipping over a lot of potential minefields here), it is a comparatively easy task to type your headlines directly on to the page.

A word on printing out the final page/newsletter. You get the choice between draft and high quality. The manual admits that it will take a long time to print out a page in high quality print. I can tell you from experience that no self-respecting snail would stand for the speed of draft quality print.

Conclusions

If the manual wasn't so clear and com-

prehensive, *FSE* would be overwhelmingly daunting. It is a program which takes itself very seriously, and has made each individual module (word processing, creating illustrations, page design) as full of features and options as possible in the available memory. It is going to take any buyer a long time to assimilate them all.

Thank heaven, then, for the Guided Tour, a page already semi made up, where the manual takes you step by step through the procedure for filling the rest of it.

Then there is this big gap between what *FSE* is capable of, and what it all looks like when printed out. We've gone through this before in the *Publisher* review on the ST (March 20), and it applies tenfold with the printer supplied with the PCW.

For example, the smallest typesize used by *FSE* (on the PCWs) is 12pt: that's bigger than the word 'Conclusions' written above; the text you are now reading is 9pt.

And whatever font you are using, you are still getting a dot matrix output. Unless, of course, you're a PCW owner with access to a laser printer.

So you will not get a newsletter that looks like a professionally typeset document. Sure, there's the facility to use a laser printer with the PCW version, but I don't know a single person who will spend £500 on an 'alternative typewriter', and then £2000 on a laser printer. I'll come back to this point later.

Newsdesk International

If *FSE* takes itself seriously, then *Newsdesk* appears a more 'tabloid' package. I do not mean this in a derogatory sense, but the one example page provided with *Newsdesk* (illustration on the inlay) shows much more emphasis on large lurid fonts, and exclamatory headlines, than *Mirrorsoft's* 'Guided Tour' page in the *FSE* manual.

Newsdesk revolves around its graphics package and font editor – indeed, one could almost believe, reading through the manual that any input of text only occurs as an afterthought.

However, transferring documents over from *Locascript* is made simple by the program. Your document needs to

This is 12 point type in a Sans Serif face

This is 18 point type in a Serif face

This is 24 point type in Westend

This is 36 point in Modern

This is 24 point in Old Style

Fleet Street Editor: type sizes and faces (actual size)

◀ continued from page 19

have been saved as an ASCII file in group 0 — from there on follow the screen prompts written *Newsdesk*.

Once your document has been transferred, *Newsdesk* has a 'mini editor', which enables you to amend the document. This is for simple deletion or tidying up spelling mistakes.

If you input text directly, you will find there is no word wrap, so if only part of a word will fit on one line, you must manually delete it and press *Return* to get to each new line. Text can then be justified, and hyphens put in to tidy up lines.

When writing headlines, the text line can be manipulated to different sizes using the *Paste* key, and each letter can be zoomed if you want to, say, thicken strokes or alter the look of any letter.

Font editing

Eight fonts are provided with *Newsdesk*, the default font, plus seven on side two of the disc. Each can be modified using the font editor. You can select individual letters to be modified and add pixels to thicken strokes, or include extra lines — changing the style of the tails of g, j, or y, for example — and pixels can also be deleted.

Newsdesk gives you three choices of typesize, 12, 24 or 36pt, as opposed to *FSE*'s four.

Using this option to actually design your own character set would be an astonishingly laborious task, but it can be used with, say, individual letters to make distinctive capital letters in headlines.

Graphics

Draw freehand using 'pen', alter the thickness and texture of a brush stroke, draw lines between one point and

another, a spray can option, set single pixel dots, plenty of fill patterns (more extinct Highland clans), a zoom facility, add text to graphics, facility to draw various shapes — it's all there.

Scaling, rotation and distortion of your pictures is also possible.

Creating a page

Selecting 'set text' from the 'windows' menu will bring up a text window on screen, whose shape you can alter if you wish, for the input of text files. Selecting 'set screen' allows you to work directly to page, within that screen window. The screen you will be given is about three quarters of a page across, and about one third of a page in depth, which is an odd size to be working on, and it can't be altered.

Again, like *FSE*, so long as you can keep track of where you are on-screen — and it's not quite so easy with a partial 'window' — the results are quite satisfying.

Conclusions

If you use *Newsdesk*'s facilities to the full, ie, you play around with editing fonts, mix up text sizes and typefaces, you will get a very 'tabloid' effect, brash and busy.

Since all the arguments above about the finished presentation of the document being limited to the capabilities of the PCW's printer, apply just as equally here, and since *Newsdesk* is designed only with the PCW printer in mind, it will also be a fairly 'ham' tabloid look.

It is worth stressing that this is down to the hardware, rather than the software, with both programs. But then, the PCW was never intended as a typesetting machine.

However, the bottom line is that if you have a PCW and want to produce mixed text and graphic documents (such as newsletters), then you can do one of three things: you can use a typewriter/word processor, pots of glue and a photocopier, you can use a 'desk top

publishing simulator' such as the programs discussed here, or you can have the whole thing professionally typeset. *FSE* and *Newsdesk* may be £70 and £50 respectively, but they're a lot cheaper than professional printing, and they look more exciting than messing around with glue.

Both packages can be used in conjunction with the Electric Studio *Lightpen* when creating graphics. *FSE* is compatible with the Kempston mouse in all sections of the program, and *Newsdesk* similarly with the Electric Studio mouse. *Newsdesk* will also take input pictures from Electric Studio's video digitiser.

Both packages can use other centronics printers (you need to change the device code from CP/M). The difference is that the *Newsdesk* manual doesn't tell you this. In *FSE*, you can use an Epson-compatible laser printer, if you have access to one; this facility is not available in *Newsdesk*.

Fleet Street Editor is an altogether more complicated package, and more powerful in its range of options. It is also probably slightly more difficult to get going with *FSE* straightaway.

However, *FSE* is rescued in this aspect by its clear (though hardly concise — it's a mighty tome) manual. The *FSE* manual contains a contents list/index, which the *Newsdesk* handbook cries out for. It also has its Guided Tour, which gives a good introduction to the basic procedures involved in *FSE*, and gives you a fair idea of where all this text-filing and graphic-editing is leading in the end.

You can tell *FSE* is an altogether more soberly-inclined product, with its glossary of printing/computer terms, 'hints on tips' on designing newsletter pages, and appendices on subjects like duplication and binding the finished product.

Newsdesk places much more emphasis on playing around with fonts, and graphic aspects of the program, and the manual, apart from being about a quarter of the size, doesn't always appear to keep its overall objective (creating a newspaper-style set of pages) in view.

The best way of describing it is probably saying that with *FSE*, you're getting the equivalent of the *Daily Telegraph*; with *Newsdesk* something more akin to the *Daily Mirror* (apologies to *Mirrorsoft*, which is after all part of the *Mirror* newspaper stable).

Having seen the more modern style of war-game recently, in the shape of *Balance of Power* and *Apocalypse*, the arrival of SSI's *Colonial Conquest* heralded a welcome return to the old days, both in terms of style and period.

Set around the turn of the century, the game lets up to six players (human, computer or passive) take on the leader-

ship of England, Germany, France, USA, Japan and Russia, and vie for control of the minor countries of the world with espionage, diplomacy, bribery, armies and fleets to call upon. The playing area is a smooth scrolling map of the world four screens wide by two screens high. It is presented with very colourful but distinctly low resolution graphics. Dotted around the

Return to days long gone

map are the supply centre cities of the major powers and, when in the appropriate phase, the ports and occupied minor cities.

The playing year is split into four phases, from Spring through to Winter during which armies and fleets can move once and attack any bothersome natives or clash with one of the other players. At the beginning of every year each player goes through a building phase, when, in addition to building up your forces, you can attempt to spy on territories around the globe to determine the incumbent troop strength and economic value, buy out the natives, fortify countries and give economic aid.

In order to be the victor you

must accumulate a pre-set number of victory points. The points can be accumulated by defeating opponents in battle, building troops and treating vast tracts of land to a spot of imperial oppression.

Colonial Conquest is very much in the board game and *Diplomacy* mold and surprisingly, is executed very well indeed. Aside from a few minor niggles, hours of grand strategy from days long gone are but a disc access away.

Sail the Seven Seas with magnifying glass in hand (Thanks to G&B Computers, Tottenham Court Road). Interact with characters such as the sultry Libertina

Movie night

Here we have the third of the Master Designer/Mindscape Cinemaware products to reach these shores, and now the programmers have turned their attentions to another famed movie, *The Arabian Nights*. These tales, together with the *Mystery of Why Anyone Buys Kia-Ors*, have been one of the longest running sagas in Hollywood.

The story has you, Sinbad, summoned back to your home city of Damaron by your childhood sweetheart Princess Sylphani (using the magical equivalent of a radio-pager) to discover that the old Caliph, her father, has been turned into a falcon, just before he was about to announce who was going to succeed him to the throne.

Naturally, the Caliph is incommunicado, being in avian form and interested in nothing much more than cuttle fish and Trill, so it's up to you to search the seven seas to find a cure.

At the same time you must take over command of the Caliph's army and defend Damaron from the hordes of the Black Prince.

You sail around the world

gaining knowledge and artifacts that will cure the Caliph, taking on an assortment of hazards and villains with trusty joystick in hand as need be. With well over 70 locations to explore and a supporting cast to interact with, it's just like being at Saturday morning movies again, only with a few naughty bits added. As usual with the Cinemaware products, the standards of graphic and audio presentation are very high indeed and the designers seem to have gone a long way towards that ideal of combining adventure, strategy and arcade elements into one playable unit.

There is still room for some improvement, the illusion that there is a 'real' fantasy world in the computer has yet to be perfected, but Mindscape is starting to come close.

Program Sinbad and the Throne of the Falcon Micro Amiga Price £39.95 Supplier Mindscape, via Mirrorsoft, Maxwell House, Worship Street, London EC2.

Room to manoeuvre

MGT is one of the slickest bits of graphic action to grace a computer screen.

It looks deceptively simple. A tank that manoeuvres like a hovercraft, a series of rooms and doors. Find your way to the final room. Unfortunately, many of the rooms are far from easy to negotiate, thanks to the presence of blocks of ice and other hazards.

Some doors are blocked by lasers. You need to find matching key panels and zap them with your own armaments to disable the doors.

In other places there are

lifts that will give you access to the raised ice blocks.

But what sets MGT apart from the usual arcade/puzzle program is the quality of the graphics. Rooms are presented in outstanding 3D effect, the Crystal Palace itself being decked out in suitably frosty tones of blue.

One criticism: there's no scoring system; you either succeed or fail. Apart from that, MGT is a first-class game requiring both arcade skills and a puzzle-solving approach. Recommended.

Just like R2D2

The latest from the dormant Ultimate stable, which has been concentrating on coin-op design recently, under a different name. And the bad news is that it still seems to be very much treading water rather than innovating, as used to be the case.

Having grumbled about that, Ultimate has delivered a game with its graphic hallmark stamped all over it, and a design that still leaves hope that the nameless ones haven't completely run out of decent ideas yet.

You control a little R2D2-like maintenance droid, with nine sectors of The Brain to look after. However, said Brain has been attacked by

Martianoids, disrupting the passage of programs (floaty bits of printout paper) as they pass from the Transmitter to the Receiver in each sector.

So, you zap the aliens, replace the bits they damage and mind the programs along their little way – as the sectors' internal defences are activated as the program reaches its destination – leaving you to concentrate on others.

Nicely implemented on the CPC (also available on other formats), this will certainly cheer Ultimate supporters (if there are any left) but will not drive anyone into a wild frenzy of excitement.

Popular Appeal ♦♦♦♦

Program Martianoids Micro
Amstrad CPC Price

£9.99 Supplier US Gold, 2-3 Holford Way, Holford, Birmingham B6.

Much celebration, hang out the bunting, fire cannons, declare public holidays, etc, at last someone has produced a Super Sprint clone.

Grand Prix Simulator certainly draws heavily on this for its inspiration, but replaces the wheel with joystick or redefinable keyboard options. It's simple faster/slower, left/right stuff, but the going is tough as you race against one computer-controlled opponent with the option of a second player joining in at the same time.

The screens are colourful, but the cars themselves lack detail – being different coloured oblong blobs – but this

doesn't detract from the enjoyment, and a few frills have been added with the introduction of some sampled speech.

Admittedly, it doesn't have all the features of Super Sprint itself – that'll have to wait for the official conversion by Activision in the summer – but for now, it's the best there is.

IT'S SELLING FASTER THAN HOT CROSS BUNS!

Incentive's winning hat trick

Tony Bridge reviews the newest adventures – and tells how to wreak revenge on your bank!

The 'nightmare' of bureaucracy is a bit of a cliché, but I'm sure that everyone has had to deal with the dreaded red tape at one time or another.

Not many of us though, get the chance for any real revenge – the latest Infocom adventure, however, is Douglas Adams' supreme revenge upon a faceless bank, after an oh-so-familiar story of a cancelled bank-card. *Bureaucracy* begins with you about to embark on a holiday trip to Paris – only you haven't reckoned with officialdom.

The adventure has yet to be released ("next month", they say), so all I can tell you is that you will be able to get your own back on the bank, as well as meeting an eccentric assortment of characters, ranging from a greedy llama to the paranoid owner of a camouflaged house. Wrap all that up in the usual brilliant Infocom packaging and add the name Douglas Adams and you've got what is bound to be a winner.

Another new product this month is *The Ket Trilogy* from Incentive. Most of you will realise that this isn't exactly new – the individual programs of the trilogy were originally released starting about 1984, I think. There was a prize, too, for the first person to work their way through the three parts – Tom Frost, whose Tartan Software I looked at in

"As each location in the Ket Trilogy is visited, another part of the jigsaw is added to the screen display . . . it's nice to see the village of Ket at last!"

detail recently, became the adventurer of the year for managing that feat.

The adventures themselves were written by Richard McCormack and Mike Nelson before the days of *Gac* and *Quill*, and were excellent tests of logic, well-presented with good screen layouts, and plenty of D&D-like combat. The games contain several in-jokes which might baffle people; there is a certain magic word in the tradition of *Plugh* and *Plover*, which is *Talps* – you would need to know some of Incentive's ancient history to work that one out. And overseas

players may not understand the reference to the mint hole and the associated password.

The new version is for the Commodore: all the features of the original three-part are there, along with something new and almost unique. As you wander around and explore the land of Ket, you, lucky Commodore owners can forget about all those scrappy bits of paper lying around the living room – you have your very own on-screen map.

As each location is visited, another part of the jigsaw is added to the screen display. Along with a little relevant picture, you'll also be given a picture of any character or object – it's nice to see the village of Ket at last!

As far as I know, the gameplay remains unchanged; *The Ket Trilogy* has been a favourite adventure of mine for years, and now Commodore owners can share in the battle to rid the land of Ket from the twin tyranny of King Vran, leader of the mad monks and the high priestess Delphia, the most beautiful woman in existence – but beware, for they are both extremely cunning and devious.

So, three great classic adventures in one package for just £7.95 – plus a fantastic saving in blank paper, what a bargain!

Ultima IV on Commodore 64. Where is the shepherd? (Eighth member of the travelling party.) Graham Boston, 53 Linden Avenue, Prestbury, Cheltenham, Gloucestershire.

Zakki Wood on MSX. How do I get the plinth in the pit of snakes? G. Fell, 16 Alexandra Gardens, Penzance, Cornwall TR18 4SY.

Morden's Quest on Amstrad CPC. Where do I find the blue directions, the well, spiderman, octopus, iron, pyrites, jester, paint, diamond and narrow crawl? **Dra-**

cula on Amstrad 464. I need the name to give the coach driver after leaving the inn after the first night. **Smugglers' Cove on Amstrad 464.** I need words on how to get the donkey into the harness to operate the lift. I can offer help on the following adventures: Red Moon, Seabase Delta, Jewels of Babylon, Heroes of Karn, Message from Andromeda, Forest at World's End, and Warlord. L. Kingshaw, 104 Farnborough Road, Clifton Estate, Nottingham NG11 8SA.

Dracula on Commodore 64. How do I keep from freezing to death on

Dracula's coach? L. Kingshaw, 194 Farnborough Road, Clifton Estate, Nottingham NG11 8SA.

The Tracer Sanction on Amstrad 1512. What do I do with the torch and how do I light it? Any other hints also welcome. I can offer advice on Hitch-hiker's Guide to the Galaxy. Ian Matheson, 26 Mosshead Road, Bearsden, Glasgow G61 3HN.

Bored of the rings on Spectrum. I can't find the scissors and don't know what to do about the Kremains. J. Munro, Flat 3, 56 West Hill Street, Perth PH1 5QP.

How to become an ace hacker

Tony Kendle explains the basics of finding your own cheats and poke routines

This week, in response to several letters on the subject I want to recap on the systems that can be used for finding your own pokes and cheat routines for machine code games.

Inevitably you will need to have had at least some familiarity with Basic and with the rudiments of machine code to be able to follow the explanations, but it really isn't as difficult as you probably suspect.

The first step is to load the machine code portions into memory without letting the game start running (of course once it does you will be unable to break out of it again for entering the poke). Getting access to the code in this way will allow you to find and enter your pokes.

However this may be the most difficult part if the game has been protected in any way, and often hackers have to use some very advanced and devious tricks to get pokes into the game, and really that is all part of the fun.

In the future we may have time to illustrate some of these more advanced techniques, but I suggest that for the time being you look out for an old game which hasn't been protected to practise on. Many releases by budget software companies will also do, as they find that the low cost of the game doesn't warrant elaborate techniques, and is itself a disincentive to pirating.

The code does not have to be loaded into memory at the same locations that it is when the game is running, but you must know the relative address changes for your pokes to be valuable to anyone else. For example if the machine-code of a game normally loads at memory location 10000 you may want to load it at 15000 to allow room for a disassembler program as well. This is OK as long as you remember to remove 5000 from the addresses of the pokes you find.

It is worth pointing out that a good disassembler/monitor program will be invaluable if you want to start hacking, but it isn't strictly essential for simple games. What you *must* have however is a simple book explaining the rudiments of machine code on your particular

machine and especially the meaning of the various binary op codes - the instructions to the computer that are signalled by the numbers held in memory.

If you do buy a disassembler it is important that it is compact and relocatable so that you can squeeze it in around long games - the ideal is software on Rom, such as is commonly available for BBC or Amstrad CPC as this takes up almost no memory room leaving you free to load the game code in exactly the right place.

If your software comes on disc it is possible to use a good disc sector reader and editor to track down cheat routines and enter 'pokes' without even loading

like the Amstrad CPC may need special Basic deprotection programs to do this).

The Basic program will look roughly like this:

```
10 LOAD "xxx" SCREENS Loads the screen picture
20 LOAD "code", 20000 Loads the machine code to memory location 2000
30 RANDOMISE USR 20000 Calls the machine code at 20000
```

To get the machine code into memory all you have to do is type as a direct command:

```
LOAD "code", 20000
```

If you want it somewhere else in memory type:

```
LOAD "code", new address.
```

"Our salvation lies in the fact that out of all the hundreds of possible combinations of commands that are used in machine code, there are only a few different options available to programmers that can be used in the addition and subtraction of numbers"

So once this code has been loaded where you want it, what on earth do you do next? You can use a monitor program to look through the memory, or write a small Basic program that starts at the loading address, peeks the contents of that memory location, prints the result of the peek to the screen, and then moves on to the next memory address.

You will see that the memory is full of thousands and thousands of numbers - how can you possibly find a poke for infinite lives amongst that lot? Even if you put the code through a dis-

assembler the output looks only marginally less hostile and obscure.

Our salvation lies in the fact that out of all the hundreds of possible combinations of commands that can be used in machine code there are only a few different options available to programmers that can be used in the addition or subtraction of numbers.

Essentially we are looking for the part of the code that does something along the lines of 'Take the figure for the number of lives, if this figure is not zero reduce it by one, (because the idiot has just flown into another laser base), and put the new number back where you found the old one. If the original figure is zero print 'You Lose etc.'

the game at all. An excellent example of one such program is *Ultraman* from Bubble Bus.

The following example draws on the typical routines found on most old Spectrum games. Owners of other machines will find the principles identical, if not the detail.

Most old Spectrum games have a short Basic loader which you load and start by typing *Load ""*. This loader in turn loads the main machine code of the game into memory, and then starts this running. Occasionally the Basic will also do things like set up the screen colours, print a *Please Wait* message or play a little tune.

You must first load this Basic program into memory without it actually running. This is normally achieved by typing *Merge ""*. (Owners of other machines

Top Twenty Charts will return after Easter.

POPULAR COMPUTING WEEKLY/

The sound of editing

Synthesizer editors examined by Mark Jenkins . . .

As far as micros are concerned, musical applications are divided into three main areas. The first is sequencing, and it's obvious that using micro with a ready-made memory and set of controls makes sense when the alternative is to develop a complicated hardware sequencer complete with operating routines.

The second application is patch storage, and again it makes sense to use a micro's disc drive or tape dump when Ram cartridges can cost to up to £70 just to store 64 sounds.

The third application, sound editing, has not always been so obvious. You'd have thought it would be possible to edit the sound of any synthesizer on the market, but the fact of the matter is that knobs and sliders are at a premium nowadays and most manufacturers try to get away with the minimum of editing controls. Yamaha's DX7 features 147 sound parameters, forty-odd function selector switches and just one editing slider, while their rack-mounting TX81Z, which is in many ways more powerful, has just four main controls.

Adding a screen display plus a set of control knobs in the form of a micro can make all the difference if you're struggling to make up new sounds. Many synths now on the market benefit from this approach, and the Caged Artist series of packages from Dr. T make the most of the micro approach to editing.

Packages so far available are CZ-Rider for the Casio CZ synths (Apple, C64), DX-Heaven for the Yamaha DX7 (Apple, Atari ST), TX-Heaven which can also cope with the keyboardless TX7 synth (Apple, C64), Kawai K3 (Apple, C64, ST), DX21/27/100/FB01 (Apple, C64, ST), Oberheim Matrix 6 (Apple, C64, ST version coming), Roland JX-8P (Apple, C64).

Here we're looking at the DX21/27/100/FB-01 editor which sells for £120. The DX21 keyboard itself is now available at a bargain price and will allow you to play any two polyphonic sounds, split or layered together with chorus, while the DX27 will play just one sound and the FB-01 is a rack-mounting module which is multitimbral, so that its eight voices can all play different sounds simultaneously if desired. This can either be controlled from a keyboard, with the

different sounds playing in different zones, or from a sequencer, with different sounds playing on different Midi channels.

Unlike the Ensoniq ESQ-1, which has 'floating' voice allocation, the FB-01 has to be told how many voices to allocate to each sound. However, that needn't be too limiting, and you could easily create a set of sounds which offered an octave of monophonic bass at the bottom of your control keyboard, then an octave of three-note polyphonic strings, then an octave and a half of two-note polyphonic brass, a monophonic lead line sound, then a few notes spare for a silly sound effect.

"The program is largely controlled from the mouse, but you can enter some values numerically if you prefer. There are also Midi parameter changes such as filtering out program changes"

Editing all that can be quite a chore, which is where the Caged Artist package comes in. Eschewing the Gem graphics environment, it displays a simple list of the names of voices currently in memory and allows you to zero in on any one of them for editing. Once you flick to the Edit page, all parameters of that sound are visible immediately.

There's a graphic envelope display which you can drag around which shows you the level envelope for each of the four operators (sine wave oscillators) and you can switch each operator on and off. The algorithm - the way in which the operators affect each other - can also be quickly altered.

At the bottom of the screen is an area listing the other parameters available - modulation type and speed, perfor-

mance controls such as pitch bend depth and so on. You can step from one operator to the next and the scale of the display can be re-defined if the envelope time is particularly long.

It's possible to 'mask' parameters so they're not affected by any changes you make, and you can select 'Randomize' for any set of parameters to create entirely new sounds. Any changes made on the screen can actually be heard to occur on the synth itself; completed files can be named and saved and it's also possible to convert DX-100 files fairly accurately into FB-01 files.

The program is largely controlled from the mouse but you can enter some values numerically if you prefer. The colours of the screen display can be altered to suit your taste and there are various useful Midi parameter changes such as filtering out program changes, something which the FB-01 itself does not allow you to do.

You can run the program from a Ram disc which speeds up saving and loading, and the very helpful handbook gives hints and tips on using the program, making the most of the synthesizer you've selected, and understanding the differences between the DX100/27/21 and the multi-timbral FB-01.

Overall the Editor - referred to for convenience as 4-Op, since it edits all Yamaha's recent four-operator synths (including the TX81Z, with some reservations) - is a pleasure to use, and absolutely invaluable in conjunction with an FB-01. However, abandoning the Gem environment makes it look a little plain and forbidding at first, but this impression soon passes. It's not fantastically cheap, but it's much cheaper than abandoning all your powerful-sounding, hard-to-edit synths and going back to old-fashioned ones with acres of knobs and switches.

Take Note, Unit 7, 43 Carol Street, Camden Town, London NW1 0HT, 01-485 2988.

If you have any queries or tips for this column, please write to Mark Jenkins at *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP. Mark would also welcome examples of your own music on audio or program tape, or disc.

THE BARBARIAN HAS ARRIVED! THE TERRORPODS ARE COMING!

TWO GREAT NEW TITLES FROM PSYGNOSIS

BARBARIAN

Can you become Hegor the famous dragon-slaying, monster-mangling Barbarian?

Are you the warrior who can enter the fearful realms of the underground world of Durlan, a world terrorized by the evil Necron?

Can you handle the adventure, the frenzied attacks, the hidden traps, the gruesome death dealing monsters?...

Your quest: to destroy the lair of the accused Necron. Your prize: the kingdom's crown.

Your task is awesome! You must live on your wits, conquer your innermost fears, use every skill and weapon available to you.

Hideous perils await. Can you survive?...

Are you Hegor the famous dragon-slaying, monster-mangling Barbarian? 512k colour versions available for Atari ST and Commodore Amiga - colour monitors only.

TERRORPODS

It's been a long watch... As the sun disappears over the horizon, the unwitting, grey bleakness of Colan becomes apparent. Following the intense heat of the day, the onset of night adds the bitterness of sub-zero temperatures to an already hostile environment, and the stark interior of the D.S.V. appears almost homelike.

Deep melancholy is suddenly smashed by the shrill scream of a siren. The status panel has gone crazy, an extraordinary array of lights flash uncontrollably. Good grief... what's happening?

Frantically, you turn to look at the command scanner, hunting through the mass of information before you, in a desperate attempt to decipher what has happened.

Your whole being freezes... It can't be! The Terrorpods...

512k colour versions available for Atari ST and Commodore Amiga - colour monitors only.

ARENA

The classic sports simulation.

BRATACCAS

Become Kyne the earth scientist accused of genetic fraud.

DEEP SPACE

The ultimate interstellar war game.

512k colour versions available for Atari ST and Commodore Amiga - colour monitors only.

FULLY COMPUTERISED TEST AND PROCESSING PROCEDURES

Automatic Test equipment is used to assist in the repair of all leading computer products. Many of these have been designed and built by Verran and subsequently sold throughout the world. The advanced technology allows us to offer our repair services at rock bottom prices to all our customers. No one can match us in performance and price.

Guaranteed reliability is one of the most important points in the selection of who should repair your computer. We are proud to offer our **SIX MONTH GUARANTEE**. Within the first three months we will repair any fault **FREE**. From three to six months only half the quoted trade prices would be charged if your computer developed a fault.

To record the sale receipt and despatch of your computer we have invested in the most advanced computer system available. Each customer unit is logged and checked before return. Whilst your computer is in our possession, or in transit to you, our insurance provides comprehensive cover.

To be assured that the service you get is the best available - use Verran. We always remember that **QUALITY IS NEVER AN ACCIDENT, IT IS ALWAYS THE RESULT OF INTELLIGENT EFFORT.**

SOAK RACK TESTING subjects your computer to a rigorous series of tests over a period of between 24 hours. Stringent quality procedures like the soak rack ensure the high standard of service our customers have come to expect.

UNBEATABLE DISCOUNT ON ALL COMPONENTS

Over £500,000 worth of components currently in stock. Unfortunately we are unable to display our complete range, if you require items not displayed just give us a call on 0276-66266 and we will be pleased to quote including delivery by first class post.

TO OBTAIN THE BEST REPAIR SERVICE AVAILABLE JUST FOLLOW THESE STEPS:

1. Send your computer securely packed, accompanied by cheque, postal order (made payable to Verran Micro-Maintenance Ltd) or quote your Access or Barclaycard Number.
2. Quote the special offer reference number displayed at the bottom of this advertisement for your £5.00 DISCOUNT on the trade prices.

LETTERS FROM OUR CUSTOMERS

"I really feel I must write and thank you for the excellent service I received." Mrs J. Gilbert, Plymouth.
"I am extremely delighted and would like to thank you again for the quick and efficient service of your company." Paul Donnan, Aberdeen.

and expanded**

40

**Rainbird's Advanced
Art Studio gets the
best from 64 graphics**

Commodore's improved market position now looks like being boosted by the long-awaited, competitively-priced Amiga 500. In this supplement we look at the power of the Amiga, and the programs such as *Starglider* which exploit the machine to its utmost.

Not forgotten is the world's most popular home computer, the 64. We review the latest version of the WIMP system GEOS, and its new accessories.

Also previewed is the *Advanced Art Studio* - the best 64 graphics yet?

Last but not least, Supersoft's C128 hardware and software packages promise to add new power to this unjustly neglected machine.

The fight against Atari seems to be bringing out the competitive spirit in both Commodore and in the third party manufacturers. The battle is on! ◀

C128-aid

CHRIS JENKINS ON SUPERSOFT'S
NEW RANGE OF C128 UTILITIES

The Commodore 128, and to a lesser degree the 128D "business" version, has never quite lived up to its promise. Partly, this is the fault of Commodore, whose marketing failed to exploit the machines' potential. Partly, it's the fault of software manufacturers who took the easy way out and continued to produce 64K software, rather than exploiting the 128's extra memory and facilities. Partly, it's the fault of the hardware design, which adds nothing new to 64K mode operation, and makes 128K operation difficult.

One of the few companies committed to redeeming the 128 is Supersoft. Three new products are on the way: the 128 Plus replacement ROM, the *Blitz 128 Compiler*, and the *64/128 Help Cartridge*.

128 Plus is the quickest and most straightforward product to explain. While the 128 keyboard has features which are not included on the 64, these are disabled in 64 mode operation so as to minimise software incompatibility problems. The

extra features include a numeric keypad (useful for spreadsheet applications), + and - keys, and ENTER key, an extra four cursor keys, ESCAPE, CAPS LOCK, and NO SCROLL (useful when studying listings).

128 Plus is a replacement kernal ROM which activates all these functions in 64 mode. Fitting is simply a matter of opening up the computer (not so simple in the case of the 128D), removing the 64 kernal ROM and inserting the 128 Plus ROM.

Help!

All this is very useful, but there are also hidden bonuses including a new command format which simplifies disc operations. For instance, `LOAD"$",LIST` becomes `@$`.

Supersoft also claims that using 128 Plus makes Basic programs run up to 60 per cent faster - but just in case operations cause any software incompatibility problems, you can switch

back to the original ROM just by pressing in the 40/80 column display switch before powering up.

128 Plus costs \$19.95, and looks like a worthwhile investment for 128 owners disappointed at their inability to use the machine's improved keyboard in 64 mode.

Even more powerful is the Supersoft *Help* cartridge, at \$39.95. Like many similar products on the market, it provides a toolkit of useful programming instructions, enhanced DOS commands, a machine code monitor, and an assembler. Uniquely, though, it operates in 128 mode using the full 128K memory.

After plugging the cartridge in, setting the switch on the back to 64 or 128 determines the power up mode. If you are using a 64, setting the switch to 128 disables the cartridge.

Many of the new commands will be familiar from other products such as the *Robtek Turbo Cartridge*, *H&P Final Cartridge* or *KCS Power Cartridge*. #A appends one program onto another; #D deletes blocks of Basic; #H highlights programming errors; #G generates line numbers; #T switches on a program trace function; #V lists the values of all non-array variables; #L lists programs a page at a time; and there are `dec/hex`

SPECIALIST COMMODORE PRODUCTS

THE star
PRINTERS FOR BUSINESS

NL-10

WHICH MAGAZINE
BEST BUY

- Automatic single sheet handling
- Tractor feed built in
- "Front Panel" mode selection
- Double and Quad height characters
- 120 cps draft and 30 cps NLO

This is the best Commodore ready printer you can buy. Combines many unique features with superb reliability, styling and print quality. But the real beauty is that the interface cartridge is interchangeable so if you change computers just buy a new interface.

In a group test with other popular printers such as Epson, Citizen and OKI what *Micro Magazine* describes the NL10 as "the Rolls Royce of this group". **ONLY £249.00**

Automatic cut sheet feeder available as an option for £63.25

SELECTED PRODUCTS

SEIKOSHA SP 180VC

A new Commodore ready printer that offers both friction and tractor feed combined with full A4 ability. Print speed is 100cps in draft and 16cps in NLO.

ONLY £189.95

1541C DRIVE. The latest version of the 1541, better drive mechanism and new colour. **ONLY £189.95**

DISC NOTCHER. Double the capacity of your disks with this handy gadget. Cuts second write protect notch accurately and easily. **ONLY £5.95**

AZIMATE 3000. Handy package allows you to easily check and re-align the tape head of your CIBM disk recorder. Includes screwdriver. **ONLY £6.95**

MOTHERBOARD. 4-slot, with either all upright sockets, or three upright and one through socket, to suit modern, please specify. **ONLY £28.00**

POWER PACK. High quality replacement power pack for CIBM 64. **ONLY £24.95**

XETEC SUPERGRAPHIX. The best centronics printer interface for your 64/128. Large buffer, downloadable fonts, etc. **ONLY £69.00**

DATA RECORDER. CIBM compatible, same performance as the CIBM 1531 but cheaper and includes a pause button. **ONLY £24.95**

Large stocks of Commodore-related equipment at sensible prices. If you don't see what you want, give us a call.

DISKS AND BOXES

25 bulk-packed D5DD disks with wip tabs and labels. **ONLY £13.95**

25 disks as above with 50 capacity lockable box. **ONLY £22.95**

25 disks as above with 100 capacity lockable box. **ONLY £24.95**

50 capacity lockable box. **ONLY £10.95**

100 capacity lockable box. **ONLY £13.95**

THE

EXCELERATOR +

For COMMODORE Computers

Why buy a 1541C when you can buy this neat, reliable and compact drive for less money?

FEATURES

- Handles Disc Turbo
- Direct Drive Motor
- 1 Year Guarantee
- Ultra Compatible
- External 8/9 Switch
- Very Reliable
- Compact Size
- Very Quiet
- Doesn't Overheat
- 20% Faster

Tests have shown the Excelsator to be more compatible with protected software than the CIBM 1541C. We can't find any software that it will not load.

TWO PURCHASE OPTIONS —

SPECIAL INTRODUCTORY PRICE ONLY £159.95

COMBINATION OFFER EXCELERATOR+ and FREEZE FRAME MK IV ONLY £179.95

DON'T BUY A LUMBERING HIPPO (1541C)! THE EXCELERATOR+ OFFERS MORE FOR LESS MONEY

THE SLIMLINE '64

A NEW IMAGE FOR THAT FAVOURITE COMPUTER

- Easy to Fit
- Lower key height

This modern case with its sleek style will transform your '64. The high quality injection mould is superbly finished in the latest ivory colour. The lower key height is also a boon to operator comfort. Fitting is very simple, requiring just a Phillips screwdriver, and can be completed in less than 10 minutes. Stock now available so order for quick delivery.

Only **£19.95**

DOLPHIN DOS

THE EFFECT IS STAGGERING.

Now established as **THE parallel processing system** for the 1541 disc drive. Hundreds of satisfied users include business, hobby, full-time programmers, and many leading software houses, including Gremelin Graphics, Domark, Superior, Alligata, Thalamus, Adventure International, and Software Projects.

The speed and efficiency is truly unbelievable. It is compatible with the vast majority of commercial software, speeding up both the loading of the program and of SECUREL files. It is brilliant when Superdisk, Easyprint, etc.] For non-compatible programs it can be completely switched out. It DOES NOT use a special disc format and your existing discs will be compatible.

FITTING

Fitting involves the insertion of two sub assembly circuit boards, one in the 1541 and one in the 64/128. These normally just plug in but on some 64s a small amount of soldering is necessary.

SOME OF THE FEATURES

- 25x FASTER LOADING (PRG FILES)
- 12x FASTER SAVING (PRG FILES)
- 10x FASTER LOADING (SEG FILES)
- 8x FASTER SAVING (SEG FILES)
- 3x FASTER LOAD/SAVE (REL FILES)
- E.G. LOAD 202 BLOCKS IN 5 SECS
- EASY AND FAST DOS COMMANDS
- USE 40 TRACKS FOR 749 BLOCKS
- MONITOR BUILT IN
- DRIVES CENTRONICS PRINTER
- ENHANCED SCREEN EDITOR
- EXTRA BASIC COMMANDS

(These figures do not allow for searching)

EXTRAS AVAILABLE
 Kernel for 128 in 128 mode **£9.95**
 User port expansion card (3 slot) **£14.95**
 Dolphin Copy (Whole disc in 18 secs and lightning fast file copier) **£7.95**
 Dolphin main board for second drive c/w lead **£44.95**

If you require further information, please send SAE for fact sheet

Best Hardware Utility of year

Only **£69.95** Available for CIBM 64, or 128 in 64 mode, please specify

All items subject to availability. E.S.O.E. Orders from Government and Educational departments welcome. Overseas Orders: Within Europe, please send advertised price. Outside Europe, add £2.00 for Air Mail.

Compile C128 Basic, add new commands and use the whole keyboard in 64 mode

converters, line compactors, free memory displays and so on. There are over twenty new commands available in total. In 128 mode, the cartridge can be disabled using #K.

Symbols such as /, %, < and @ are used to load, run, save and verify programs on disc. There are also abbreviated commands to format and validate discs, rename and copy files, and so on.

Monitor

The monitor and disassembler, which work in either 64 or 128 mode, allow you to disassemble machine code routines step by step, transfer blocks, switch banks, and even disassemble memory in the disc drive. The manual, though, assumes that you have a working knowledge of machine code.

The two-pass assembler allows labels to be used in place of addresses and constants, and takes its inputs from source files on disc which are typed in as

if they were Basic listings. Assembled programs can be saved using the 128's built-in machine code monitor.

While the Help cartridge is obvious short of many of the functions of rival products - printer utilities, sprite killers, program backup routines and so on - it is ideal for the 128 programmer who wishes to make full use of the micro's enormous memory.

If you can't cope with machine code, there is an alternative in the form of the Blitz Basic Compiler. Like the versions already available for the 64 and PET computers, the 128 version, on disc only, allows you to compile Basic programs into a fast-running, unlistable form with little or no alteration. Cost is \$29.95.

After loading the compiler, you insert the disc containing the Basic program to be compiled. You then have six options to choose from; single, dual or two single drives, either using the COLLISION and RESUME commands with full syntax, or with no COLLISION command and

abbreviated RESUME. The second set of options will run 15% faster than the first set, and will take up 20% less memory space.

Having chosen the appropriate option, there are five compiling modes to choose from, the first chosen automatically if you have a single drive, the others suitable for two drive systems.

Mode 1 saves the compiled program on the source disc with a c/ prefix. It also generates a second file with the prefix z/, containing cross references to the original listing for use in debugging. The run-time routines required to execute the compiled "p-code" are incorporated in each program independently.

Compiler

Mode 2, Batch Compilation, compiles all the programs on the source disc at any one time, and writes them to the destination disc. To save time and disc space, no cross reference files are created.

Mode 3 batch compiles, but includes the run-time routines only in the first program - this mode, then, is only used if the first program calls the others and passes parameters to them.

Mode 4 is similar to mode 3, but also creates a list of all variables and arrays. All arrays must be dimensioned in the program module which will reference them first, if you wish to use this method of chaining.

Mode 5 is similar to mode 1, but incorporates no run-time routines in the compiled program.

Blitz checks and reports on syntax, type mismatch and undefined statement errors during compilation. Errors in program logic, though, can only be reported when you run the program, and since the line numbers are stripped away all you are given is a program counter value. This is the value of the cross-reference file which is produced in 128 mode.

Blitz uses true integer arithmetic to speed number-crunching, disables the RUN/STOP key while a program is running, and can cope with machine code routines either in the form of Basic data statements or loaded separately from the main program. It will automatically identify most commercial extensions to Commodore Basic, and leave them uncompiled, allowing them to be used if the extension is installed at run-time. Compiled programs are around 60% of the original size.

All of Supersoft's 128 products are valuable additions to an under-exploited micro; and the good news is that there are even more on the way. ◀

HOW MUCH IS THAT AMIGA IN THE WINDOW?

AMIGA POWER AT ATARI ST PRICES?
CONRAD PLANCK LOOKS AT THE A500

At last it looks as if the Amiga's unrivalled graphics and processing technology are going to become available at an affordable price. The A1000's special processing chips and advanced disc operating system made it the most exciting new computer of 1986, its price, though, proved a shock for enthusiasts.

The new models, the A2000 business system and A500 home computer, have sparked a new wave of interest in a computer which at one stage appeared to have been knocked out by the Atari ST; superficially a similar, but cheaper, package with its 68000 central processor and high-quality graphics.

The A2000 is aimed at the business market, with 1Mb RAM expandable to 9Mb, and optional IBM emulation and 5.25 inch disc drive in addition to the standard 3.5 inch drive. Cost will be around £1288 without monitor.

More interesting in many ways is the A500, aimed directly against the Atari ST, with a £587 price tag, TV modulator, single-unit design with built-in 3.5 inch drive, 512K RAM, and the graphics and sound capabilities of the A1000.

Enthusiasm for the new machine has already been voiced by a number of software houses. Prominent among these is Rainbird, whose ST packages are ripe for conversion to the Amiga.

While the Magnetic Scrolls adventure **The Pawn** has already been a critical success for Rainbird, more eagerly awaited is the Amiga version of **Starglider**. This wire-frame 3-D shoot-'em-up was first seen on the ST, and has since been converted - with varying degrees of success - to eight-bit machines.

Judging from a preview, though, the Amiga is the machine **Starglider** was made for. The graphics are very similar to those of the ST; the control panel is in fact identical, ported across from the ST.

The animation, though, is around 30% faster than that of the ST, and smoother too. There's definitely a greater feeling of controlling a flying ship, and the perspective effects have been slightly enhanced to give a better impression at low levels.

The main improvements are in the area of sound. On the ST, the title music is a single long sound sample, and there is no music playing during the game. On the Amiga, each instrument sound is individually sampled from a Yamaha DX7

FM synthesizer. Tunes are then played by varying the sample pitch according to music data actually created on a Sinclair Spectrum. The effect is much more "real" than a sampled tune.

There's a great title theme, and music playing throughout the game (the Amiga's sound chip and multi-tasking capabilities allowing this without slowing down the action).

Good use is made of the Amiga's stereo sound abilities; hook the audio outputs up to your hi-fi, and firing effects will sound from the speaker on the side to which you are aiming. New sound effects include a sickening thump if you hit the ground, and much improved explosions. The speech samples ("Missile launched!") are also much improved, with greater clarity.

Another important addition is a joystick control option, not included on the original ST version. The plot remains the same; chase down and destroy the flagship of the invading Egrons, avoiding rotating missile silos, stompers, walkers and flyers, and searching out refuelling towers and computer centres. As before, the game comes complete with a novelette, control guide and poster.

This brilliant demonstration of the Amiga's advanced capabilities will be available from the middle of April at £24.95.

Appearing elsewhere on the page you'll see another demonstration of the Amiga's

graphics power. Eric Graham's juggling robot was programmed on a standard 512K Amiga, using a ray tracing algorithm to generate the reflections in the glass bubbles.

Each frame of the animation requires 64,000 light rays to be calculated. The process takes about one hour for each frame, and the results are then compressed into around 10K.

To simplify the calculations, the entire robot figure is made up of spheres, which the ray tracing algorithm can cope with most easily. The background and

the glass spheres are clearly reflected as the robot juggles; the speed of the animation (which is in fact simply frame-swapping) can be controlled by the function keys, which can also freeze the action allowing you to examine single frames.

The Amiga's hold-and-modify function is used so that 4096 colours can be displayed at the same time.

While the juggling robot is a free-standing graphics demo rather than part of a commercial program, it gives some idea of the Amiga's potential for professional-quality computer animation. Let's hope that the new wave of interest sparked by the announcement of the A500 gives rise to packages which will fully exploit this impressive machine's abilities. ◀

Atari ST Reference Books from Abacus Software

**Definitive!
Instructive!**

You Can Count On

Abacus Software

ST Internals

(Formerly Anatomy of the Atari ST)
An essential guide to the master's information on the ST. Written for the programmer wanting a thorough, complete description of the inner workings of Atari's outstanding ST computers. Detailed descriptions of graphics and sound chips, hardware, the Centronics and RS-232 ports, GEM, important system addresses and much more. Included is a commented BIOS assembly listing. This reference work is a required addition to your ST library. Third printing.

AB 450 446 pages **£14.95**

Abacus Software

GEM Programmer's Reference

An indispensable guide for the serious ST programmer needing detailed information on GEM. Written especially for the Atari ST. It has an easy-to-follow format. Covers everything the right programming language, introduction to C and assembly languages, a study of the Editor, G-compiler, Assembler & Linker, programming the Virtual Device Interface (VDI), Application Environment System (AES), Graphics Device Operating System (GDOS), and interfacing to DOS. Many example programs. Cross-referenced VDI AES calls.

AB 470 412 pages **£14.95**

Abacus Software

Tricks & Tips

Fantastic collection of ST program tools and techniques for the ST. Programs include a super-fast RAM disk, time-saving print spooler, colour print hardcopy, plotter output hardcopy, accessories construction kit of these programs and more are included in the price of the book! Learn how to create brilliant graphics, use the VDI/SYS commands, and master the powerful GEM applications. Refine your BASIC, assembler and C programs with advanced programming techniques.

AB 455 260 pages **£14.95**

Abacus Software

ST BASIC Training Guide

An educational, well-written introduction to Atari ST BASIC. You'll learn to program your ST quickly with the BASIC commands, problem analysis, and algorithms presented in the first few chapters. Quizzes throughout the book help you learn to "think in BASIC" while you get a practical grounding in the language at the same time. Topics include data flow and program flowcharts, menus, multi-dimensional arrays, sort routines, file management, BASIC under GEM, advanced programming techniques, and much more.

AB 485 312 pages **£12.95**

Abacus Software

Introduction to MIDI Programming

Your ST's built-in Musical Instrument Digital Interface (MIDI) lets you control any MIDI-equipped digital synthesizer – and the results can be phenomenal! This book covers the fundamentals of MIDI operation on the ST – how a synthesizer is actually interfaced with the ST's MIDI ports. Includes C sourcecode listings for comprehensive MIDI editor, driver and assembler player for any of the Casio CZ series, etc. Written by the authors of XLENT Software's ST Music Box™ package.

AB 520 250 pages **£14.95**

Abacus Software

Peeks & Pokes

Enhance your programs with the PEEK and POKE examples in this book. Clearly explains a number of the most important PEEKs and their uses. At the same time, you'll get a good look at the architecture of the Atari ST. Topics include: the ST's configuration and interfaces, its "intelligent" keyboard, the mouse, pointer and stack, disassembles TOS, GEM, interpreter, compiler, choice of programming languages, input and output, much more.

AB 480 175 pages **£12.95**

Abacus Software

ST Machine Language

Learn 68000 machine and assembly language to make the fullest use of your ST. Takes a systematic approach in presenting number systems, logical operations and bit manipulation, use of registers, structures and details of the 68000 instruction set and the ST system routines, explains the functions of the editor, assembler, linker, etc. Contains many sample programs.

AB 465 280 pages **£14.95**

Abacus Software

Graphics & Sound

An in-depth look at creating sophisticated graphics and surprising music and sounds on the ST. Detailed guide includes step-by-step introduction to graphics in all resolutions; 2-D and 3-D function pointers, mouse patterns, graphic memory, various resolutions, fractals, recursion, sound waveform generation, MIDI. Example programs written in C, LOGO, BASIC and Modula-2/ST. See and hear the audio-visual possibilities built into this remarkable computer.

AB 460 255 pages **£14.95**

Abacus Software

ST Disk Drives: Inside and Out

The definitive guide to the ST disk drives, including the Atari ST hard disk. This exhaustive volume not only covers files, the structures and data management, but details both the programming and technical aspects of the floppy drives, hard drives and RAM disk. Includes programs listings for several full-length utilities and programming tools that allow you to further explore the capabilities of these drives. Available first quarter 87.

AB 445 375 pages **£16.95**

Abacus Software

ST BASIC to C

Move up from BASIC to C – in a hurry! If you're already a BASIC programmer, you can learn the fundamentals of C language programming all that much faster, usually in less than one day. Parallel examples demonstrate the programming techniques and constructs in both languages. Topics include variables, pointers, arrays, data structures, more.

AB 515 250 pages

Abacus Software

NEW ATARI ST 3D GRAPHICS PROGRAMMING

Concepts and Techniques

3-D Graphics

Teaches ultra-fast 3-D graphics techniques in 68000 machine language. Axis rotation, zooming and shading of 3-D objects. Learn the mathematics and data structures behind 3-D graphics. Topics include transformation and projection of all three dimensional figures to 3-D, hidden line removal, shading, introduction to 3-D CAD. Complete with 3-D plottermaker and animator.

AB 550 351 pages **£16.95**

Abacus Software

ATARI ST TRICKS & TIPS

Optional Program Diskettes

Available for all of our ST Reference Library titles. The diskettes contain most of the programs found in the text of the book, saving you the time and trouble of typing them in on your keyboard.

GEOS' NEW WORLD

THE WINDOW, ICON, MENU AND POINTER FRONT ENDS OF THE MACINTOSH, AMIGA AND ATARI ST ARE NOW AVAILABLE ON THE CBM 64. CHRIS JENKINS LOOKS AT THE LATEST VERSION OF **GEOS**, AND AT THE NEW WORD PROCESSING, FONT AND DESKTOP PACKAGES DESIGNED TO EXPLOIT ITS ABILITIES.

In the age of the Amiga and the Atari ST, the relatively unsophisticated Commodore 64 looks more and more out of date. **GEOS** is an attempt to bring it right up into the era of WIMP systems.

GEOS, the Graphic Environment Operating System, looked like setting new standards when it was rumoured that it was to be bundled with the 64C. This came to nothing, and despite some good reviews the package hasn't made much impression on the UK market. This may now change, with the release of several new utility packages, as well as an updated version of the main program, **GEOS 1.3**.

The aim of the system is to overcome the inherent difficulties of the 64's disc operating system and user interface, by putting all program functions under the control of a mouse (or joystick), controlling a pointer, selecting icons and functions from pull-down menus. The

theory is fine; the problem is that the 64 does not have the operating speed or the memory size of a Macintosh, Atari ST or Amiga, and so **GEOS** can still be frustratingly slow to use.

The screen displays, though, look lovely; menus to the top right, files displayed by name or icon in the central window, and further icons for printer type, trash can and current disc. The original word processor running under **GEOS** - **GeoWrite 1.3** - has certain limitations which have been addressed in the new version, **GeoWrite 2.0**. This is found on the **Writer's Workshop** package, costing \$37.50.

Your first task is to make backup copies and working discs from your masters. Obviously, the 64's memory is not large enough to hold the entire operating system at one time, so you have to copy each sub-program onto a separate disc. You will still need the master, which

provides an anti-piracy measure.

GeoWrite 2.0 is far more advanced than the original version, which really only allowed you to enter text, preview its screen layout, then print it in a variety of type faces. **2.0** features a command menu across the top of the screen, with a writing window which takes up

most of the display. To the right of the display is the title bar and page indicator, while below the file menu is an inch ruler which allows you to change the format of the document.

Inside the writing window are the pointer and text cursor, which are used to control all the wordprocessor's functions. As you type, the writing window scrolls across and down; unlike, say, **Easy Script**, where you have to go into video mode to see the true layout of the text.

Using the command menus and keys, it's possible to insert and delete text, set tabs and margins, insert page breaks, move forward or backward one page, move to any specified page, move blocks of text, set justification, line spacing, headers and footers, insert page numbers, search and replace words or phrases, and even insert the current time anywhere in the document.

The **GeoPaint** utility is a straightforward hi-res graphics package with nothing unique to recommend it; either Wignore House's **Artist 64** or Rainbird's **Art Studio** outperform it. However, **GeoPaint** graphics can be incorporated into **GeoWrite** text, although they cannot be printed in draft print mode. In high quality print mode, you have access to all the different **GeoWrite** fonts, plus graphics, but the printing is correspondingly slower.

The **GeoMerge** utility allows complex data files to be built up using true/false statements. In this way **GeoWrite** can cope with relatively simple exercises like mailing lists, or with more complex multiple-copy letters.

GeoWriters can also grab Easy Script, Paper Clip, and many other types of word processor files, and even has a facility for use with a laserprinter.

Also included on the system disc, at \$49.95, are a calculator, notepad, printer drivers, preference manager and back-up routine.

FontPack 1, at \$23.50, is a useful addition to GeoWrite; it provides twenty new fonts ranging from 10 to 24 point size. GEOS can handle up to eight fonts at a time, but you can of course store many more on a disc. Although some are suitable only for headings (since they are only available in 24 point), the selection is excellent and even includes a set of mathematical symbols. The manual provided gives examples of each style, and was itself produced using GeoWrite and Fontpack 1.

Deskpack 1, at \$26.50, is a more substantial package, featuring three useful applications and one turkey.

The **Graphics Grabber** is one of the most interesting applications, allowing you to load and edit graphics from **Print Shop** (distributed over here by Precision), **News Room** (Ariolasoft), and **PrintMaster** (never heard of it). These can then be incorporated into your GeoWrite and GeoPaint documents.

The **Icon Editor** is just what you need to convert all your old disc files to GEOS standard. It allows you to edit old icons, or create new ones, and append them to your discs. The routine is very much like a sprite editor, simplified in that it does not deal with colours.

The **Calendar** will get you organised up

to the year 9999 - by which time I imagine even the CBM 64 will be obsolete. Each day of the month is represented by a square in which you can enter an asterisk, which opens a file in the datebook. Similar to the **DeskTop** notebook, this allows you to enter notes for each appointment. You can then scroll through your dates, or click on the question mark icon to reveal a list of dates flagged.

The last utility is in fact a game, **Las Vegas Blackjack**. Why desktop utility packages traditionally include something of this kind, I don't know; but I wish they wouldn't bother.

Also available is **GeoDex**, at \$26.50, a card index system which can be used as a source file for **GeoMerge**. This is likely to be superseded shortly by a more sophisticated package, **GeoFile**.

Also on the way is **GeoCalc**, a full-featured spreadsheet, more font and graphics packages, and an 80-column C128 version of GEOS.

Once you have recovered from the culture shock of producing all the necessary working discs, upgrading your disc files and learning to use the desktop

system on the 64, you still face some problems. Although GEOS is obviously a mouse system, the Commodore 1350 and 1351 mice are not yet available, and the system does not work with the mouse provided with the Commodore Connaisseur's Compendium, so you are reduced to using a joystick or KoalaPad. This is no fun at all.

Secondly, GEOS is very American; zip codes in the card files, clock speeds which mean that the alarm clock has fifty seconds in every minute, American spellings everywhere. There are apparently no plans to anglicise the package.

Apart from that, GEOS works, and the release of the new packages indicates that support for the system will be continuing. Unless you intend to buy an Amiga - and even if you do, but you intend to keep your 64 - GEOS may be the best way to drag your 64 into the '90s. ◀

First Analytical, 70 Borough High Street, London Bridge, London SE1 1XF, 01-403 5493.

Rainbird's **Advanced Art Studio** is the latest version of a graphics package which has met with considerable critical success on a wide range of eight-bit machines.

The original package was, in its time, probably the best overall painting program for the 64. Although Wigmore House's **Artist 64** offered more special effects, and other packages might have been more straightforward to use, Art Studio's menu/window system and choice of controllers made it the first choice for many micro artists.

The Advanced version retains many of the features of the original, while adding important functions in the fields of colour handling, control options, picture merging and font definition.

The package comes complete with two cassettes or discs, and two handbooks, because a copy of the original **Art Studio** is included with it. This is important, because the two packages operate in different graphics modes. The original version operates in hi-res, making it usually necessary to draw in mono, then add colours in a separate operation. The resultant colour attribute problems - caused by the hardware rather than the software - were one of the drawbacks of working with **Art Studio**.

The new version operates in multi-colour mode. While this does not give such high resolution, it cuts down colour attribute problems to a minimum, making it practical to draw with a full palette. The Advanced package, though, includes a conversion program which transfers hi-res pictures to multi-colour mode; hence the inclusion of both programs in the package.

The Advanced Art Studio's format is pretty familiar. Along the top of the screen is a series of menu labels and icons. Moving the cursor over the label and clicking brings up a sub-menu, in which options are highlighted. Incidentally, control can be by keyboard, Datex mouse, joystick or Koala Pad.

Let's skip through some of the menu options. Print allows any of 48 sizes of screen dumps to be produced on any Commodore or Centronics printer capable of bit-image printing. Density can be varied too, as can orientation and justification.

Colours brings up a display of the full 16-colour palette. On this sub-menu you can set colour priorities in any order, so that, for instance, if you are drawing in

blue, it will paint over red but will not paint over yellow. This makes it possible to do things like painting in a background after the foreground, and can apply to any operation including cut-and-paste, fills and so on. Current ink, paper and border colours are set here, too.

Another new feature is the ability to exclude any colour from any operation, so, for instance, you can erase a defined

From the paint menu brushes of any shape and colour pattern can be defined too, the default set consisting of segments cut from the default patterns. There's also a choice of airbrushes, which spray on more pixels the longer you hold them in place.

The text facilities have also been improved, with nine sizes, variable spacing, bold, italic, variable orientation, a full font editor, and again the ability to save fonts to disc. The finished package will come supplied with several fonts already defined.

There's a powerful zoom mode, with three levels of magnification, an optional drawing grid, and an "intelligent" feature which tries to choose the best combination of pixel colours should you overshoot the number of colours allowed in one character square.

The shapes menu brings up the usual selection of rectangles, circles, triangles, lines, rays, dots and so on.

Most interesting perhaps is the Windows menu. While all the usual facilities for cutting out, pasting down, and replacing areas of the drawing are provided, there are also some novelties. Windows can be inverted, turned on their side, or remapped at different sizes; they can also be saved to disc, making it possible to build up a whole library of "fuzzy felt" pieces which can be pulled off the disc and stuck down

anywhere on the picture at a later date.

Lots of minor points contribute to making AAS easier to use; the continuous cursor coordinate display; the choice of cursor shapes and functions; the ability to save set-ups containing your control parameters, fonts, patterns and brushes; the full undo function; and the Screenloader utility which allows AAS pictures to be incorporated into your own programs.

Rainbird's Advanced Art Studio strikes me as the ideal combination of user-friendliness and sophistication, producing the best possible performance from the Commodore 64. ◀

ART FOR WIMPS

CHRIS JENKINS LOOKS AT THE NEW ADVANCED VERSION OF RAINBIRD'S SUCCESSFUL GRAPHICS PACKAGE FOR THE 64, ART STUDIO, AND FINDS LOTS OF NEW FACILITIES THROUGH THE SQUARE WINDOW . . .

window, but leave any chosen colour in it untouched.

The fill facilities have been improved by the addition of a default set of twelve multi-colour fills to replace the original mono fills. These are used in the normal way - although due to the way AAS stores attributes separately, fills are pretty slow. There's a fill pattern editor grid with useful clear, scroll, invert and other functions; and up to 12 patterns at a time can be saved to disc.

In the same way, although there are sixteen default pen shapes, you can also define your own pens and save them.

IF YOU CAN FILL THESE SPACES IN ANY OF THESE PLACES

WE ALREADY FILL THESE SPACES

We are looking for enthusiastic, bright individuals to add to our team of management professionals and talented programmers to advance even further our position as the UK's premier software development house. You'll recognise the product successes that give us the solid foundation and financial structure to properly reward the efforts of our programmers and back their products to maximum success, but what you may not realise is the depth of expertise we include in our 30 strong team - music and animation being only two of the specialisms available "in house", state of the art equipment being included as essential tools.

Now we are propelling our successes to even greater heights not only by acquiring exciting new licences for smash hit products but by opening new software development offices (Canada and USA included - so start packing your bag!) to increase the pool of products that will elevate the name of Gremlin from the UK's No. 1 to World No. 1.

If you have the talent, come in from the cold and join a team of professionals that's geared to not just get the best from you, but to give you back much, much more.

SO FILL THIS SPACE NOW!!

Dallas – the chess opera

Martin Bryant, author of Colossus Chess, reports on the World Microcomputer Chess Championships in Dallas

The 6th World Microcomputer Chess Championships took place in the stunning Dallas Informart, Texas, from the 1st to the 6th November last year. The occasion was the rejoining of two major computer societies (the ACM and IEEE) in their renowned autumn joint computer conference series.

Despite the excellent facilities, Dallas is not known as a chess centre, and comparisons were made with the 5th Championship in the World Trade Centre, Amsterdam, which is recognised as a model of a well-organised event of this type.

As a spectator event the 6th championship rated poorly, not only because the venue was moved from a readily accessible (though small) space off the main lobby to an area that was out of sight and out of mind of the conference attendees, but also because it lacked vendors' exhibits or a Grand Master simultaneous match, like GM Sosonko's in Amsterdam.

Of course there were good reasons why more was not possible, and not the least was that half the participants were also actively involved in the 17th North American Computer Chess Championship (the longest running event in computer chess) which was taking place in the nearby Anatole Hotel seemingly only a short one kilometre walk away, but a

major headache for competitors toting heavy computer equipment. The competitors are listed in the box.

Despite last minute clarifications on the entry requirements, which undermined the organisers' plans, and despite the paranoia of some participants and the way they filed the usual bunch of complaints/protests, the event proceeded with the games speaking louder than the harsh words exchanged.

Such nervousness is common in micro events where millions in sales can rest on the result of the tournament. How-

paired against weaker ones as they can't play their "brothers".

The reason for allowing multiple entries is just that a hefty entry fee is charged to cover tournament expenses and the big manufacturers are made to cover this. Thus, although there were 14 entries, only six were unique.

With competitors from Germany, Hungary, Holland, UK and USA the event, not surprisingly, got off to a late start on Halloween night. Quickly, the top contenders, Fidelity and Mephisto, demonstrated their superiority by winning all three of their games. After five rounds, Mephisto 3 had won all its games, and Fidelity A & C held a narrow lead over the rest.

After six rounds though, Mephisto 3 couldn't be caught, but Recom denied Mephisto the 100% score by beating it in the last round. Finally, then, Mephisto programs came 1st, 3rd and 5th, with Fidelity 2nd and 4th and Recom 6th.

One thing that did show up is the almost impossible task new programs have against the old hands. Here the Kempelen programmer, with his Atari ST system made no real progress against the professionals, although it had some close games.

The graphics were good, but 10 weeks is not long enough to rewrite a chess program to world level.

Program	Programmer	Publisher
Mephisto (68020)	Richard Land	Hedner & Glaser
Fidelity (68020)	D & K Spracklen	Fidelity Electronics
Cyrus (68020)	David Levy	Intelligent Software
Recom (6502)	Ed Schroder	Marel
Monster (80386)	J Middlecoff	Cypress Software
Kempelen (68000)	H Gyula	Sierra Software

ever, the complaints were dealt with in a serious and conscientious way.

The same results reflected both the intrinsic speed of the hardware and the manufacturer's experience with the unit. Each manufacturer was allowed up to three entries (nominally identical) but they would not play each other because of "fixed" games. This gives an unfair advantage over the single entrant as you have three times the chance of winning and also the pairing system is affected so that stronger programs have to be

We want your programs!!

Yes, this is your chance to get rich and famous. Well, famous anyway, as *Popular Computing Weekly* is looking for contributions to the Programming pages.

What sort of thing are we looking for? You name it – anything original from games to utilities, applications and the like, written in Basic, machine code or anything else you can think of.

Programs for any computer will be considered, not just the old faithfuls

(Spectrum, Amstrad, QL, Commodore, etc), so send those listings in. What we need is a working copy of the program on tape or disc, plus an accompanying article or documentation that you would anticipate going with the piece, normally not over 2000 words.

Alternatively, send in your short programs to the Bytes and Pieces page – what could be easier?

In return, we'll pay the princely sum of £25/page for the main programming

pages and £10 for each Bytes & Pieces contribution we publish. Plus the fact that your name will be indelibly carved in the *Popular Programming Hall of Fame* till time immemorial. What more could any true programmer ask?

Just send your masterpieces in to Duncan Evans, Technical Editor, *Popular Computing Weekly*, 12-13 Little Newport St, London WC2 7PP and he'll assess them post haste.

Raster Scroller

Neil Raine

Here we go with the second and final part of the listing. Use the following pokes to manipulate the scrolling area.

Poke 50054, scrolling direction
(1=left, 2=right)

Poke 50040, (1-8) scrolling speed
Poke 50052, (1-16) multicolour 1
Poke 50053, (1-16) multicolour 2
Poke 50050, (1-16) border bottom

Poke 50051, (1-16) border middle
colour

Poke 50036, (1-180) position of top raster

Poke 50037, (1-193) position of bottom raster

It is important that the top raster has a lower value than the bottom raster.

Poke 50048, (2-12) character pointer

Poke 50049, (2-12) character pointer for non-scrolling set

To obtain the pointer value, divide the address of the character set by 1024. Use four for the Rom character sets.

The following Sys calls are also available.

Sys 49920 fills the scrolling area with character 32.

Sys 49972 stops scrolling and preserves its status.

Sys 50011 restarts the scrolling.

Programming: Amstrad CPC

Icon Toolkit

Simon T Goodwin

Icon Toolkit provides eight new commands for Amstrad Basic that enable the user to create (or simulate) a WIMP (windows, icons, menus, pointer) environment from Basic. Also included is an Icon Designer program to enable the user to design icons for use from Basic. There follows a brief rundown of the commands followed by a description of how firstly icons and secondly menus can be set up from Basic.

Icon Commands

:Source, base Sets the base address

address

:Icon,x,y,number

from which the icon data is to be taken. One icon takes 64 bytes.

Places an icon on the screen. When design-

ing icons it is best to make notes of the order in which your icons are stored. In the example memo program

5 icons (numbers 1 to 5) are used.

*:Pointer,x,y,
colour,@a%*

Places a pointer on screen at x,y in a certain colour. The pointer can be moved around the screen with the cursor keys. When the COPY key is pressed the variable a% returns the number of the icon selected.

Window/Mouse Commands

:Tcoord,x,y,@a% Returns the screen address equivalent of text co-ords x,y.

:Gcoord,x,y,@a% Returns the screen address equivalent of graphics co-ords x,y.

:Cut,screen address,store address,width,depth

:Paste,screen address,store address,width,depth

These commands store and replace respectively a section of the screen starting at the given address, in the store address. The dimensions of the screen section must be given (in bytes not pixels).

:Fwindow,screen address,width,depth,mask

Fills a specified section of the screen, starting at the given address with a pixel mask (1 to 255). The dimensions of section must be given (again in bytes, not pixels).

Examples

To use the icon commands:

1. Design your icons with the designer. If you require more than 5 icons you can merge your designer files into memory at 320 byte intervals. (320 bytes = 5 x 64 bytes).
2. Set the *:Source* command to the base address of the data.
3. Place your icons on screen with the *:Icon* command.
4. Place the pointer on the screen with the *:Pointer* command.
5. Use the *On a% . . .* command to assign sub-routines to icons.

For example:

```
10 memory 39999
20 load "data".40000
30 :SOURCE.40000
35 print chr$(23);chr$(11)
40 p%=1
50 for n%=100 to 500 step 100
60 :ICON,n%,300,p%
70 p%=p%+1
80 next
90 a%=0=:POINTER,50,300,1,@a%
100 on a% gosub 200,300,400,
```

```
500,600
200 rem SUBROUTINES . . .
300 . . .
400 . . .
500 . . .
600 . . .
```

To use the window/menu commands:

1. Use the *Tcoord/Gcoord* commands to find the required location for a window.
2. Store the present contents of that location with the *:Cut* command.
3. Fill your window with a background using the *:Fwindow* command.
4. Set up menu of print message in window using Basic.
5. When finished replace the old screen contents in place of the window.

For example:

```
10 a%=0=:TCOORD,10,10,@a%
20 :CUT,a%,16384,40,100
30 :FWINDOW,a%,40,100,240
40 paper 1=pen 0
50 locate 12,11=print "WINDOW"
60 locate 12,15=print "PRESS A KEY"
70 while inkey$=""=wend

Programming: Spectrum

Spectrum Rom Calls

Russell Thomas

In this three part article I hope to show you how you may "borrow" routines from the Spectrum Rom to both

"This article will show you how you may 'borrow' routines from the Spectrum Rom to improve your programs"

improve the look of your own programs and, if you wish, to develop your own

Operating Systems complete with error messages and so forth. I have given the routines names of their own so that it will be easier to refer to them. To get us started let's take a look at an alternative to the *Pause* command as used when waiting for a key to be pressed.

Wait key

100 PRINT #0:"ANY MESSAGE:"

PAUSE 0: . . .

continued on page 46 ►

◀ continued from page 45

Pretty standard stuff I think you'll agree. So what's the problem? The problem lies in the method adopted to effect a pause on the Spectrum. (The culprit is the Z80 *Halt* instruction). In a nutshell, the screen is disturbed slightly for the duration of the pause resulting in fine, grainy lines traversing the screen.

Solution ...
100 PRINT "ANY MESSAGE.";USR
5598:

- 1) Notice only one command to effect both message printing and pause.
- 2) This is the same as the method used by Sinclair to print the copyright message etc.
- 3) The message can be empty if you like, eg:

100 INPUT USR 5598:

Editor

The following Rom call will allow you to invoke the Editor from within a Basic program (128 users, this will put you in 48K mode). This can be used to stop a program without using a Stop statement and, consequently, no Stop report at the bottom of the screen! To call the Editor enter the following:

100 RANDOMIZE USR 4777

Lower CIs

This routine can be used to clear the lower part of the display (where the reports are printed). It (normally) has no effect on the rest of the screen. To use it enter:

100 RANDOMIZE USR 3438

The routine can be extended to clear a

greater portion of the screen by first *Poking* the system variable DF SZ with the number of lines you wish to clear.

100 POKE 23659,12:RANDOMIZE USR

3438

or even,

100 PAPER 2: POKE 23659,

12:RANDOMIZE USR 3438

which will clear it in a different colour without upsetting the rest of the screen!

Autolist

This routine is really an alternative to

the Editor call mentioned earlier. It will allow you to stop a program and as the name suggests, give an automatic listing of the program as typing *List* causes the *scroll?* message to appear. You will then be left in the Editor again. More about this routine later. To use it enter:

100 RANDOMIZE USR 4770

Scroll

The old ZX81 *Scroll* command is still there! Calling this routine will scroll the screen up by one line. Of course, you can stick it in a loop if you wish.

100 RANDOMIZE USR 3190

Double byte Pokes

As you are probably aware, there is no *Dpoke* command on the Spectrum. *Dpoke* is a method of storing a whole number (whose value can exceed 255) in two consecutive memory locations. Let us say we wish to *Dpoke* 12345 into the two locations starting at 65530.

RANDOMIZE 12345: POKE 65530,
PEEK 23670: POKE 65531, PEEK 23671
or to see the values.
RANDOMIZE 12345: PRINT "LO=";
PEEK 23670, "HI="; PEEK 23671

Free

Yes, there is a *Free* command inside the old beast! To use it type:

PRINT 65536:USR 7962;" BYTES
FREE:"

If an 'OUT OF MEMORY' report appears, then you will have less than 80 bytes of memory left.

Tune in next week for more Spectrum Rom Calls.

Programming QL

Menu

Seb Tomasini

This procedure was designed as an aid to the development of any program which may need at one

stage the use of a menu of some sort. The list of options should be stored as part of the program in a data list. The line number which has the data in it should be entered to the procedure through the parameter *datalist_no*, and the title for the on screen menu should be stored in

title\$.

The QL must be in mode 4 and the paper for window #1 should be zero black. The option number which is selected is stored in the variable *Dnum*. The option name is stored in the variable *Str\$(Dnum)*.

```
10000 REMark *****
10010 DEFINE PROCEDURE MENU(datalist_no,title$)
10020 REMark *****
10030 REMark This global procedure gives an on-screen menu which looks for the menu 'options in a data list. The variable
'title$' is the title for the menu. The option selected is returned in the variable 'Str$(Dnum)'

Programming Atari ST

Software
Sprite

Stephen C Underwood

Unknown to the public at large, the ST has a built in sprite routine that can easily be used by the

machine code programmer. The sprites in question are not true sprites, since they are generated by software rather than by hardware, but they are still a powerful tool for the creation of your own arcade game.

The sprites are 16 by 16 pixels in size, and two routines are supplied, one to draw them and one to erase them. The way the routines work, the background

is saved in memory before a sprite is drawn at that spot, and replaced afterwards by the original background when the sprite moves on. Unfortunately, both movement of the sprites, and detection of a 'collision' must be dealt with by your own software routines. Nonetheless, these routines are extremely fast.

continued on page 50 ▶

Programming: Atari ST

◀ continued from page 49

The routines are part of what is generally known as the 'Line A routines', and use 14 'illegal' machine code instructions to CALL the routines. For the technically minded, when the error occurs, an exception vector is invoked, and the routine it points to carried out. This checks for the error number and carries out the appropriate routine.

As with most routines, to use the sprites you must first initialise the system. This is done simply by the illegal bytes \$A000 and nothing more need be said about this. To draw a sprite, a data block has first to be set up, some registers used as pointers, and the routine then called. The data block has the following format:

DC.W X Offset
DC.W Y Offset
DC.W Format (0=VDI 1=XOR)
DC.W Background Colour
DC.W Foreground Colour
DC.W Background Pattern Of Top Line Of Sprite
DC.W Foreground Pattern Of First Line Of Sprite

The last two lines are repeated 15 times with the different patterns that make up the sixteen lines of your sprite.

The format decides how the Sprite will

combine (or not as the case may be) with what is already on screen:

Fore-ground Value	Back-ground Value	Bit Displayed
VDI Format		
0	0	Background screen colour
0	1	Data block background colour
1	0	Data block foreground colour
1	1	Data block foreground colour
XOR Format		
0	0	Background screen colour
0	1	Data block background colour
1	0	Screen pixel XORed with Data foreground bit
1	1	Data block foreground colour

Having set up your data block, you must now set some registers before calling the sprite draw routine. The registers must be set as follows:
D0 - X Coordinate
D1 - Y Coordinate

A0 - Points to the start of the data block
A2 - Points to the beginning of an area of memory where the screen background can be saved before drawing the sprite. (Each background requires 74 bytes in monochrome display, and 266 bytes in low resolution colour mode.)

To call the sprite simply use the illegal instruction \$A00D after setting the registers and creating the data block.

Undrawing a sprite is much easier, but relies on the fact that one has already been drawn! Simply use A2 to point to the beginning of the area of memory that the screen background was saved to before drawing the sprite on the screen, and use the illegal instruction \$A00C.

Needless to say, setting up one sprite can take some time, but the same sprite is drawn many times, and only the X,Y and saving location of the screen background vary for each sprite. Thus, considerable time savings can then be made. However, beware, when the two sprite routines are called, the registers are altered when the routines return so the values must be reset each time.

Since an example is the best explanation of all, here is a program that places a Space invader on the screen in high resolution monochrome mode.

GFA BASIC

INTERPRETER for the ATARI ST

- A high speed BASIC
- GFA BASIC Interpreter programs run on any ST using supplied Run-only interpreter
- A modern highly-structured but easily used programming environment
- Full user-friendly Editor
- 11 digit mathematical precision
- Occupies only 55K leaving ample room for programs and data

A full high-quality disc-based BASIC Interpreter for the Atari 520 and 1040 ST. Comes complete with:

- GFA BASIC Interpreter disc
- 300 page ring-bound manual
- Utilities and demonstration programs on disc include:

ST to GFA BASIC converter
Run-only interpreter
screen-dump routine

GFA BASIC'S STRUCTURE

- No line numbers required but lines may have labels which can be numeric
- Supports PROCEDURES with local variables
- Recursive Procedures with parameter passing
- IF-THEN-ELSE-ENDIF, WHILE-WEND, DO-LOOP and REPEAT-UNTIL structures fully supported

Graphic Commands

Full access to LINE, CIRCLE, ARC, ELLIPSE, POLYGON, etc. Drawing control of line style and fill. DEFFILL command for 'unfilling' pattern.

Sound Commands

Control over voice, volume, note, octave and duration. The overall waveform and the mixing of the three voices, or white noise, can be defined.

GEM facilities

- Control of screen height, width
- Control of window size, shape, position
- Mouse control, read position, click states
- Open and Close windows, add titles

Operating System Functions

Routines may be called in BIOS, XBIOS and GEMDOS, with full passing of parameters.

The GFA BASIC Interpreter offers the Atari 520 ST and 1040 ST user a remarkably easy and versatile means of controlling this powerful computer. The built-in Editor facilitates easy data entry, while the Interpreter creates very fast-running code. By means of the **Run-only Interpreter**, programs can be exchanged freely between ST users. The Run-only Interpreter is simply copied onto a disk, along with your program - it's not protected - to provide independent high-speed code. If you have lots of ST BASIC programs of your own then they're not wasted! Simply run them through the Converter utility supplied and transfer them into GFA BASIC.

REVIEW

Basically the best

GFA Basic is really fast... but the speed isn't limited to the mindless number crunching, as the graphics demos spectacularly prove. GFA Basic is also compact, taking up 55K of valuable memory - yet it provides a structured programming environment second to none, with a bewildering array of useful commands. A silence descended on the office and mouths hung open as the demo of the block memory move command drew a pattern in a window, then plastered copies of it all over the screen at the rate of about five per second.

Bench test No.	Speed (seconds)	
	Fast Basic	GFA Basic
1	0-145	0-105
2	0-58	0-395
3	1-305	1-025
4	1-55	1-01
5	1-505	1-085
6	2-575	1-765
7	4-11	2-845
8	2-725	2-945
Average:	1-801	1-397

POPULAR COMPUTING WEEKLY

COMPILER for the ATARI ST

...and, if the GFA BASIC Interpreter isn't fast enough, then there's always the **GFA BASIC Compiler** to speed things up even more. The Compiler is fully compatible with GFA Interpreter and compiles 100% of commands with no programming restrictions.

A fast two-pass compiler that produces compact, high-speed transportable 67500 object code.

- fully compatible with the GFA BASIC* Interpreter
- compiled programs will run on any ST without GFA BASIC
- requires no linker or additional programs
- allows fully secure programs to be created - PRG files produced cannot be LOADED or LISTED
- commercial software written in GFA BASIC requires no licence or payment of royalty

Facilities

- Four "break key" options
- Easy handling of any arithmetic overflows
- Error numbers can be expanded to produce full error messages, or left unexpanded producing compact programs
- "Bomb errors" can be intercepted and handled within compiled program
- Automatic code optimisation, eg. A* replaced by A. 2
- INC, DEC, MUL and DIV commands compile to single machine code instructions

Ideal for

- software developers
- educational establishments
- solving technical problems
- training organisations

Screen Store

A Campbell Black

This routine for the Spectrum 48K and 48K+ with Interface One allows you to store a copy of the screen in memory and recall it later. *Poke* will store the screen while *Peek* recalls.

To use the routine, *Clear 58389* then load the code and enter *Randomize Usr 58390* to activate.

```

15 CLEAR 58389
20 LET t=0
30 FOR n=58390 TO 58454
40 READ d
50 POKE n,d: LET t=t+d
60 NEXT n
70 IF t>7455 THEN PRINT "err
or in data": STOP
80 SAVE "m":1;"extendcode"COD
E 58390,65
90 RANDOMIZE USR 58390: PRINT
"NEW COMMANDS ACTIVE"
92 PRINT : PRINT "POKE stores
copy of screen in memory "
94 PRINT : PRINT "PEEK recalls
stored screen"
95 STOP

with Kenn Garroch

Cursor speed of 64

J Seesahai of West Kensington, London, writes:

Q I am writing to ask if you can please let me know how I can change the cursor speed on my Commodore 64 computer.

A The cursor flash rate, keyboard repeat rate, and internal clock are all controlled from the CIA chip timer A at locations 56324/5. To change the speed at which the cursor blinks, and the keyboard repeats, Poke a new value into 56325. Low values make things go faster, high values slow things down. The normal value is around 50-60. If you put a low value in, Basic programs will run quite a lot slower, a high value (255) speeds them up a little. The reason for the change in the speed at which programs run is due to the fact that the timer starts an interrupt routine which updates the clock, checks the cursor blink, and reads the keyboard. If these routines occur too often, processor time for Basic programs is used almost totally by the interrupt routine, making the program run very slowly.

Epson printers

M McCraw of Salisbury, Wilts, writes:

Q Would you please tell me if there is any interface and cable with which I can connect a C64 to an Epson LX80 printer? If there is, where might it be purchased? At the moment, I use the

printer connected to an expanded Electron and do not really want to have to buy a separate printer for the 64.

A There are quite a few parallel/Centronics interfaces available for the Commodore 64. You might like to try the Final cartridge and centronics printer cable from H&P Computers, 9 Hornbeam Walk, Witham, Essex, 0376 511471. When ordering things by mail order, it helps if you can do it via credit card since this is both quicker, and gives you some protection if the goods fail to appear.

Those crazy 1541's

P Becket of Bury, Lancs, writes:

Q After my 1541 has been on for roughly 45 minutes, it behaves very oddly. During a session with 'Portal', the drive began spinning (without the red light) and just kept on spinning. Also at such times, it fails to find any directory, it won't save anything, and sometimes goes into a routine that sounds like formatting. I have to end this by whipping the disc out and switching the machine off. The things is, after a rest, all is back to normal! It loads, finds, saves, and everything seems fine. Please help before I go crazy!

A One of the things that can cause the problems you are having is placing the 1541 too close to the monitor/TV. The magnetic fields interfere with the operation of the drive and cause all sorts of strange happenings. In your case however, the drive appears to be overheating.

although this is quite unusual. Make sure that the surface you place your drive on allows air to freely circulate beneath the drive and try not to place things on to the case since this can cause problems as well. Check the cable connections to the drive to see if they are loose. The best thing to do is waggle them around and see what happens. If the trouble persists, there may be something more drastically wrong and you will have to get it looked at professionally. This should not cost more than £30 or so, depending on the fault.

From QL to ST

D M Brewwood, of Dorking, writes:

Q Could you please resolve an argument that has recently arisen. The problem concerns the 68000 processor used in both the Sinclair QL and the Atari 520 STFM.

I own both the above machines and have many Super-Basic programs running on the QL that I would like to run on the ST. As both machines use the same processor, would it be possible to copy the QL Rom, via the RS232 ports, onto the ST and would this allow the ST to run QL programs?

The other point of view is that an assembler listing of the QL Rom would need to be obtained and then implemented on the ST, with modifications to allow discs etc to be used.

A The QL and the ST are similar in only one respect - they use nearly the same microprocessor. The ST uses the 68000 and the QL the 68008, the differ-

ence between them being that the 68008 has only an 8 bit data bus and 20 bit address bus, whereas the 68000 has a 16 bit data bus and a 24 bit address bus. As far as the rest of the machine is concerned, the differences are quite major.

To transfer the QL operating system onto the ST, all of the I/O routines would need to be altered since the discs, screen, keyboard, RS232, and printer ports are handled differently. The memory layout is quite radically different. The ST's I/O is located right at the top of the memory map where the QL software would not be able to reach. On the whole, it would probably not be worth the trouble of fitting the QL operating system into the ST. What may be possible is to take the Super-Basic code and transfer it so that it will run under the ST operating system. To do this, however, you would need to know a great deal about the way in which the language operates as far as memory storage and I/O are concerned. Not something to try without some help from the authors.

Local Apricots

S Bateman of Slough, Berks, writes:

Q I have recently become an owner of an X1-FD Apricot and was wondering if you know the address of a local Apricot user group, preferably in the Berkshire area.

A Try contacting Mike Mudge, Square Ace, Stourbridge Road, Penn, Wolverhampton WV4 5NF. Tel: 0902 892141. He will be able to supply details of user groups in general.

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem **Peek** it to Kenn Garroch and every week he'll **Poke** back as many answers as he can. The address is **Peek & Poke, PCW, 12-13 Little Newport Street, London WC2H 7PP.**

One for the Digitiser

Haba's previous digitiser offering for the ST featured a high resolution digitising ability but suffered because you had to pause the incoming signal. The Realizer Video Digitizer features a lower resolution (320 x 200 pixels) screen but can grab frames from the source.

Inside the video-style case you are supplied with a cartridge for the Rom port, manual, software disc and screen filters. To get things going, the cartridge is inserted in the usual place, the file labelled *DQui.Prg* loaded and your image source connected to the phono input on the cartridge itself.

As the input signal is supposed to be composite video this called for, in our case when connecting the ST up to a video recorder, a BNC to phono lead. The problem is that this combination of plugs is hardly standard, so a little surgery was called for. Alas this didn't work, but connecting the RF output up instead did.

Assuming that all systems are now operational you are presented with the following drop down menus - File, Options, Pic-Ops and Prn-Param.

it, followed by the automatic digitising option.

Using this you can get a digitised image from about twice per second to once every two seconds, depending on the amount of grey levels that you are using. Use fewer and you get faster digitising but cruder images. The brightness and contrast settings can be altered at this point but it is rather inconvenient, in that the images are changing constantly.

The Lookup table allows you to assign different colours to the greys used initially, giving false colour pictures of the subject. Unfortunately this part of the program is poorly implemented in that you are not informed of the Red-Green-Blue values of the colours selected, nor can you reset the colours back to their original grey levels, except by guesswork on the colour chart or rebooting the program.

The next thing to consider is how many levels of grey you want the image digitised in. For just looking at a video source choose two, as it's the fastest option, and for actual digitising the 16

option is the one to go for. A strange thing here, though, is that although the image is being digitised in 16 shades of grey, the ST can only have eight in its entire palette so each shade is used twice. Re-assign the colour on one of the pairs, though, and you'll appreciate that it is actually doing the job in 16 levels.

The last two options on the Options menu include using a Fast option, if you have a 1040ST or higher, and printing out the image digitised according to the parameters set up in Prn-Param.

The other drop down menu worthy of note, Pic-Ops allows you to play various art package style tricks with the image including inverting, producing a mirror image, and zoom and dezoom for chunky close ups.

That basically is that. Except to mention that if your video source is a camera then by judicious use of the colour filters you can attempt to produce a colour image from the black and white source.

The Realizer Video Digitizer works quickly and effectively, the images produced from the humblest of equipment (ie, my video recorder) are fair and it is compatible with a number of art packages. Not stunning or of extremely high quality as the manual likes to claim, but you should certainly consider it if digitised images are what you're after.

Consider this also: the Commodore 64 digitiser that this is substantially based on costs £80.

Duncan Evans

"Using the digitiser, you can get a digitised image from about twice per second to once every two seconds, depending on the amount of grey levels that you are using. Use fewer levels and you get faster digitising but cruder images"

The File menu facilitates the saving and loading of digitised screens in *Neochrome*, *Degas*, *Doodle*, *Art Director* or *Bit Image* (for use with *Fleet Street Publisher*) format. Unfortunately you cannot save a screen just as a block of screen memory, so that when reloaded directly back by your own programs it appears in shades of grey.

Using *Bit-Image*, for instance, results in a horrible mess. The best way round this appeared to be saving files in *Art Director* format, setting the colours (or shades of grey) required from within your own program and then loading the file into screen memory. Completing the File menu are options allowing you to load or save false colours from or to disc.

Moving onto the main menu, Options is where most of the important functions are housed. Top of the list is Digi-Calib which automatically sets up the Realizer for optimum brightness and contrast. Next is the function to actually grab a frame of the incoming signal and digitise

This image was digitised using 16 levels of grey

The Professional Adventure Writing System

PAW

Professional Adventure Writer

Spectrum 48K, Plus 128, Plus 2

Coming soon for Commodore / Amstrad

The Professional Adventure Writer is a state-of-the-art graphic adventure writing system, which allows you to design, write and illustrate, fast machine code adventures with ease.

It provides a powerful sentence parser which allows complex chained commands to be decoded automatically.

Simple to use multiple process tables allow characters and problems to be created for your adventures.

Versatile graphics editor provides 'rubber banding', high speed shading, scaled subroutines etc etc.

Allows impressive illustrations to be created quickly and easily.

Has many other outstanding features making it probably the most advanced authoring system available yet.

Makes full use of all the memory
on the 128K machine

Wait 'til the midnight hour

David Wallin returns with new ways to reduce your phone bill, and answers to readers' queries

This week it is back to my mailbox. I've news from the Adventurers' Club, a new Mug, an answer to Mike Leek's Cirkut problem and a couple of other items.

Firstly, the Adventurers' Club has some news about Hendon Fido-Net bulletin board, on which it runs a large section. Firstly, the board has had a second telephone line installed. It can now be accessed (24 hours a day) on 01-200 7577 (the original number) and also 01-200 8281. Both lines are V21 and V23 (300/300 and 1200/75) with V22 (12000/1200) on its way.

With two lines, the board becomes multi-user and so multi-user facilities are being added. The first is a user-to-user chat with the possibility of online Mugs, based on famous adventures, in the future.

On the subject of on-line games, Hendon Fido-Net has currently two on-line adventures with a third to follow. These aren't the crude, simple sysop written adventures found on most boards, but Infocom games. The first adventure installed, and possibly the most well known adventure there is, was *Hitchhiker's Guide to the Galaxy*, followed by the slightly less well known, but still excellent *Sorcerer*. The success of these is to be followed by the risqué *Leather Goddesses of Phobos*.

These adventures can be played while on-line. Also you will be able to play on any computer. From a ZX80 (even a Z88) to an Amiga to a Compaq 386. These adventures are definitely worth playing - Infocom is generally reckoned to write the best adventures in the world.

While adventures are still warm in your heart, I've got news of a new Mug, based in Surrey. The game, which is designed to combine the good bits of all Mugs, is called *Mirrorworld*. Unfortunately, I have never been able to get on as the line has been too noisy, though other people have had no problem. The number is 0883-844044 at 1200/75 BN1. I should be doing a full report on *Mirrorworld* in the near future.

One thing I would like to point out to all adventure players is the cost of Mugs. A friend of mine racked up a £2000 phone

bill in one year. This was through playing a popular Mug in London for hours each day, until 4am on many occasions. Having learnt his lesson his advice to keep a careful eye on the amount the phone is used is sound. I agree as I once racked up £15 in one day on the same Mug. One solution, and this column has looked at many ways to cut down the cost of communications is to have a midnight line installed.

A midnight line is an addition to your current phone line and basically it allows you to make free inland calls from midnight to six in the morning. The system works by disconnecting your meter from your line during these hours.

The line costs £165 to have set up and £130 a quarter to use (the first quarter is not free, it costs £295). You must agree to keep the line for 12 months minimum, costing a total of £685 a year (less than the £2000 mentioned above, though). Midnight line is not cheap, yet it could result in a saving, provided that you are prepared to make all your calls from midnight to six in the morning (ie, you work nights or have strange social habits).

Information about midnight line can be found in the Information Centre (go through the Northwest door) in *Shades* on MicroNet, where Richard the Wizard keeps it up to date.

Now on to a reply to Mr M Leek's Cirkut problem. This reply comes from Mr P Ravenscroft of Bath. Mr Leek wanted to know a couple of things about the Cirkut interface for the Amstrad and whether it is a 'standard' interface.

According to Mr Ravenscroft, the interface is nonstandard and thus will not operate with most public domain software without a lot of hassle.

There is a solution - CPL2. CPL2 is a piece of communications software specifically written for the Cirkut Amstrad Interface by Cirkut. It covers Viewdata and Ascii operation with downloading available in either Ascii or XModem protocol. I don't know what features the software has but it costs only £14.95 so whatever features it has, it is good value. It comes on tape in unprotected binary format (that means you can copy it to

disc without fancy copier programs - provided you do not pirate it for a third party) and is available from Cirkut Distribution, Park Lane, Broxbourne, Herts.

Lastly on CPL2, Mr Ravenscroft says that it comes with a very clear manual and can handle everything that the hardware can. I hope this is of help to Mr Leek and others and my thanks go to Mr Ravenscroft for sending his reply.

Now, Mr Ravenscroft himself has a question. He wants to put some programs he's written into the public domain but can't afford hours on the phone uploading them. Unfortunately I do not know of any boards in his area he can contact (1200/1200), but if there are any his address is below and we would both be grateful if any Bath sysops could contact him.

Failing this there are two things I would try. I would get in touch with the CP/M user group and also the UK PD library. One or both should be able to help. They should take a disc or tape and distribute the software on to boards for you. This reduces the cost to a disc and postage - perhaps £7 which you may find they return to you.

It is very nice to find someone prepared to put all the software they have written onto the PD as they feel 'obliged to' in thanks for the programs they have downloaded - this is how the PD library grows.

Mr Ravenscroft lives at 23 Arlington Road, Oldfield Park, Bath BA2 3PG. If any sysops of boards in his area want his telephone number then get in touch with me via Telecom Gold (72-MAG30190), Prestel (819991214), Prometheus (01-300 7177 *8a) or MusicTel Plus (0843-590000 section C) and I shall give it to you.

The CP/M User Group's address is C/O Ms Diana Fordred, 72 Mill Road, Hawley, Dartford, Kent. The PD library can be contacted on 0342-315636, 300/300, 1200/75 and 1200/1200.

Their address(es) and other information should be available from this board. There are other Amstrad (CP/M and AmsDos) specific BBs around the country who would welcome the software.

LESTA-HEAD PLUS

Still the most versatile 48K Spectrum utility program to design and print your own business and personal stationery: letters, notices, orders, labels and posters, save the design on screen, select the required format and print all the copies you need.

- Library of 25 different fonts including foreign alphabets
- Fast compiled fast editor to modify and create new fonts
- Any screen portion may be zoomed, inverted or saved
- Box function encloses any area in a box of any thickness

- Graphics draw, arc, circle, plot, fill for logo design
- Load and use any SCREENS from another program
- Print headings in a choice of 18 sizes
- Single key selects cassette label option
- Choice of different proportionally spaced characters
- Price £3.00

DUMPY 30

All the screen dumps you will ever need for your Spectrum! Unlike other screen dump programs DUMPY is a screen dump GENERATOR. It creates the machine code, relocates it, and saves it ready for you to use in your programs. No need to understand assembler, just follow the menu. The improved version now includes:

- Windows dump: definable start and end of both columns and lines
- Optional automatic screen area determination
- Handles the full 24 lines of the display
- Select from up to 7 different print devices
- Select from up to 5 widths and 9 heights of output

- Print black and white or shaded colour representation
- Tab to any position on the paper
- Machine code can be positioned anywhere in RAM
- Vertical or sideways dumps (for log printers)
- Price £8.10

LIN-O-TYPE

- Add style to your written word: print out any wordprocessor file in high density NLQ in a choice of 25 fonts. Turn your Spectrum into an electronic typewriter, superb for addressing envelopes, filling in forms or writing short notes
- Full on screen WYSIWYG line editor
- Library of 25 different fonts including foreign alphabets
- Up to 16 fonts may be mixed on each line
- Fast, compiled fast editor to modify and create new fonts
- Single or double width characters and underlining

Price £8.50

ASTRUM

NEW! The very best 280 assembled and monitor package for the Spectrum. It is exceedingly versatile, powerful and easy to use and allows unlimited source code to be assembled from drive to drive. Supports microdrives or GPUS DISKETTES.

- Full screen wordprocessor style editor
- 256 columns wide for properly documented source
- Search and replace. Block copy, delete and move facilities
- Unlimited line storage in 19K pages
- Input macros for easy to read, compact source code
- Assemble large programs, drive to drive - including GPUS
- Include source files written with most other assemblers
- Monitor features up to 9 breakpoints in RAM or ROM if 1
- Show ram facility with 9 breakpoints in RAM or ROM if 1
- Character/breaks after number of passes through a loop
- Library of useful utility programs for the handling
- Price £13.50 (includes microdrive or GPUS version)

All Bradway Software programs drive Epson compatible printers (Brother, Star, M-T, Dime, Centronics, etc.) via Hi-Binary, Kenyon/Tanaka, Morse, Wafelink, Interface 1, 2, 3, Print III and Opto interfaces.

Prices are for cassettes and include P.M. within Europe. Please add £1.50 for microdrive cartridge, £2.50 for GPUS, £2 worldwide airmail postage. (Upgrades from previous versions: (where appropriate) £2.

Transdisk Version 3.0

The most powerful tape file system for the Atari now made even better. Transfers random, machine code, "text" cassette games or any other software to disc. Single, multi-stage and now even run-standard format tapes present no problem to Transdisk. Plus, enjoy the convenience of loading and saving your newly transferred software from an automatic disc. No other tape to disc utility for the Atari is as powerful or successful as this £19.95 inc. Supplied as disc with instructions.

The Freezer!

An amazing new utility for the Atari! "Freezer" programs while they are RUNNING on your computer. The Freezer then takes over control and allows you to make a back-up copy of the frozen program. The back-up copy will load, and the program from the frozen point, on ANY Atari XL/XE computer, independent of the Freezer! Freezes disc or tape programs even those that are heavily protected. Easy to use - just one key to freeze the program in memory then input a blank disc and the another key to save - that's it! £19.95 inc.

Send an S.A.E. or phone for more details of these utilities.

Special offer order both programmes for £35.00

Make Cheque or P.O. payable to DISCOMM and send your order to:

ATARI ST QUALITY SOFTWARE at SOFTER PRICES!

WHY PAY MORE — FOR LESS!
FOR USE WITH ALL COMPUTERS IN THE
ATARI ST SERIES

ATARI REAL TIME CLOCK CARTRIDGE

Constantly keeps time and date accurate to the second. Plugs into cartridge port. Software included to set system clock and calendar. Never lose track of files again. £49.95

ATARI ST TOOLKIT

ROBTEK TOOLKIT consists of 6 utilities that use the GEM environment. They will help you in a very simple way to get more speed and power from your ST computer.

- PRINTER SPOOLER: This utility makes it possible to use your computer while you are printing.
- RAM DISK: This utility will speed up your file operations, saving you hours of time.
- DISK COPY: Is a utility that helps you make backups and format disks at a much easier and faster speed than normal.
- DISK UTILITIES: Are a set of three programs that will help you to control and organise your disk directories. It is now very easy to keep an accurate library of all your disks. £19.95

ATARI ST-KEY

Marvellously versatile GEM Desk: Accessory for Function-key macros. Customize 20 function keys (normal and shift) for up to 2000 keystrokes from within any application. Save and load settings. £14.95

THE 8 TRACK PROFESSIONAL MIDI SEQUENCER

Equal to a professional recording studio. Includes step-time recording, auto-correct, edit phrases, filter, auto punch-in for track editing. MIDI set, includes full and easy to use tutorial, hints and tips. £69.95

ATARI MACRO MANAGER

Gives you the ULTIMATE personal time management tool for your daily work environment. Now you can incorporate true desktop organization, information mgmt: time accounting and auto dialing to your Atari ST computer system — and do it all in conjunction with most other ST programs. Robtek's version of sidekick. £29.95

ATARI COLOR WRITER

GEM-based, full featured, word processor. Also includes multicolor screen text, and high-lighting capability. Multiple ways to select a screen block. Unique insert/replace mode. Search Color feature and much more. £24.95

ATARI DB-CALC

An excellent easy to use database with built in calculating facilities specially designed to take full advantage of the GEM environment and other elegant features built into your ST computer. "Best database programme of the year in Holland and Belgium". £49.95

ST GAMES COMPENDIUM

10 exciting games for the Atari ST. £14.95

ST CHECKMATE

Offers you the challenge and intrigue of traditional chess, plus a wide variety of sophisticated features. £14.95

John Cook looks through this week's new arrivals

Amstrad CPC

Program Grand Prix Simulator Type Arcade Price £1.99 Supplier Code Masters, 1 Beaumont Business Centre, Beaumont Close, Banbury, Oxon OX16 7RT.

Heavily inspired by the arcade coin-op hit *Super Sprint*, but none the worse for that. Lacks the detail and faithfulness that the Activision 'official' conversion (due out Summer '87) will undoubtedly have – but until then, it's the best there is – buy.

Program Express Raider Type Arcade Price £9.99 (tape), £14.99 (disc) Supplier US Gold, Units 2/3 Holford Way, Holford, Birmingham B6 7AX.

See Commodore 64 listing for comment.

Program Auf Wiedersehen Monty Type Arcade Price £9.99 (tape), £14.99 (disc) Supplier Gremlin Graphics, Alpha House, 10 Carver Street, Sheffield S1 4FS.

Mole's last adventures as he hops, leaps and generally weebles his way across Europe.

Program Bonzo Doo Dah Type Utility Price £11.50 (disc) Supplier Nemesis, 10 Carlrow Road, Ringstead, Kettering, Northants NN14 4DW.

Program Bonzo Super Meddlers Type Utility Price £11.00 (disc) Supplier Nemesis, 10 Carlrow Road, Ringstead, Kettering, Northants NN14 4DW.

Program Gauntlet – The Deeper Dungeons Type Arcade Price £4.99 Supplier US Gold, Units 2/3 Holford Way, Holford, Birmingham B6 7AX.

Program BMX Simulator Type Arcade Price £1.99 Supplier Code Masters, 1 Beaumont Business Centre, Beaumont Close, Banbury, Oxon OX16 7RT.

Another racing game offering a true two player option from Codemasters. Did very well on other formats – and the CPC version plays just as well.

Program Microvalue Type Arcade Compilation Price £3.99 Supplier Tynesoft, Addison Industrial Estate, Blaydon upon Tyne, Tyne & Wear, NE21 4TE.

Amstrad PCW

Program Moonmist Type Text Adventure Price £24.99 Supplier Activision, Pond Street, London NW3.

Usual Infocom standard of presentation and content in this adventure set in a haunted West country mansion. Recommended for adventure beginners – but hardened types may find the problems a little too easy.

Atari ST

Program Shanghai Type Strategy Price £24.95 Supplier Activision, Pond Street, London NW3.

Program Digi-Drum Type Application Price £24.95 Supplier Microdeal, Box 68, ST Austell, Cornwall PL25 4YB.

No extra hardware required to produce some great drum sounds with this package – but it has one whole bunch of flaws.

Only two channel sound (therefore only two sounds at once), tempo only measured in arbitrary units (not the standard beats per minute) and

Take away Chinese

Program Shanghai Type Strategy Micro Amiga (ST) Price £24.95 Supplier Activision, Pond Street, London NW3.

It has been said, here and there by the odd commentator, that the enjoyment of any game is considerably enhanced by its graphics.

Now, Mr Playability here, yours truly, has from time to time entered into strong intellectual discussion with types putting forward such a case.

But from the moment *Shanghai* on the Amiga was booted up, I was eating my words faster than a ministerial cooper.

Shanghai, you might remember, is a sort of three dimensional patience played with Mah-jongg tiles, and was released on the 64 some months ago. Even then, the potential of the game was obvious, but it never sparked the imagination – the display of low red white on red was, quite frankly, dull. You certainly can't say that of the Amiga version.

Quite simply, artists Gene Smith and Glyn Anderson have produced a display that genuinely projects the illusion that what you are seeing on the monitor is real.

The tiles are beautifully designed and delicate shading makes the stacks of tiles stand out from the screen in a way both pleasing to the eye and effective when you are playing the game against the clock – for *Shanghai*, although a variation of that leisurely game patience (and pairs come to think of it), has its own variations that will get your pulse racing just as fast as the most frantic shooter.

The game is played by matching pairs of tiles, removing them (by double clicking) – thus, hopefully, uncovering new ones. However, only tiles at the end certain tiles at

worst of all, the system can't be synchronised with any external systems (essentially ruling it out for use in any home recording set up). Naughty.

Program Digi Drum Samples

the ends of 'The Dragon' (the stack of 144 tiles) are eligible for matching.

The 'deal' is random each time around, and it can be played at your convenience, with a little help from the computer when you run out of ideas. Alternatively, you can play it tough.

Tournament play is fun – you play out a fixed stack against the clock and see how many tiles you can remove in a certain period of time. Then a friend can try to do the same deal, and attempt to beat your score. This is bad enough, but when you get down to Challenge play, the adrenaline really starts to flow.

This has you alternating moves with an opponent against the clock – so you get a fixed time to make a move (10, 20, 30 or 60 seconds, depending on how cocky you feel), then the other player gets the same time to find another – or forfeit a point.

Point is, there were similar facilities on the 64, but because the graphics (although worthy) were dull and unimaginative – so was the game. Not so on the Amiga – and to a less extent, the ST.

If you can catch this running on said machine, sell grandmothers to do so, but have both hands prepared to catch the jaw as it falls open.

Type Application Price £14.95 Supplier Microdeal, Box 68, St Austell, Cornwall PL25 4YB.

Extra samples (41 to be precise) for loading into the main Digi-Drum module.

Atari XL/XE

Program Microvalue Type
Arcade Compilation **Price** £3.99 **Supplier** Tynesoft, Addison Industrial Estate, Blaydon upon Tyne, Tyne & Wear, NE21 4TE.

As with all the new Microvalue compilations, you get four games for just under four quid. *Jet Set Willy* is included on the Atari release.

BBC B

Program Sphere of Destiny
Type Arcade **Price** £7.95 (tape), £11.95 (disc) **Supplier** Audiogenic, PO Box 88, Reading, Berkshire.

Fast *Trailblazer* clone written by author of *Psychotria* (itself slightly similar to *Uridium*) Gary Partis. Still, there's 64 levels of it, and nothing similar available on the BBC. I'd go for it if I were you.

Program Starquake Type
Arcade **Price** £9.95 (tape), £11.95 (disc) **Supplier** Bubble Bus, 87 High Street, Tonbridge, Kent TN9 1RX.

Superior arcade adventure converted to the BBC by Kenton Price, who happens to go to the kind of public school where you have to wear 17th Century attire, lick the floor clean and get beaten seventeen times a day. Most of the old boys are now members of the Cabinet, I suppose.

Program Modern Master
Type Utility **Price** £11.95 **Supplier** BBC Enterprises, 35 Marylebone High Street, London W1M 4AA.

Terminal package for the BBC that should get you hooked up without too much trouble.

C16/Plus 4

Program Microvalue Type
Arcade Compilation **Price** £3.99 **Supplier** Tynesoft, Addison Industrial Estate, Blaydon upon Tyne, Tyne & Wear NE21 4TE.

Commodore 64

Program Express Raider
Type Arcade **Price** £9.99 (tape), £14.95 (disc) **Supplier** US Gold, Units 2/3 Halford Way, Halford, Birmingham B6 7AX.

Coin-op conversion from a Data-East original, with your good self holding up a steam train, all set in the Wildest West. Try it out.

Program Gauntlet - The Deeper Dungeons Type
Arcade **Price** £4.99 **Supplier** US Gold, Units 2/3 Halford Way, Halford, Birmingham B6 7AX.

Just when you thought it was safe to go back into the dungeons... no such luck, pal.

Program Vampire Type
Arcade **Price** £1.99 **Supplier** Codemasters, 1 Beaumont Business Centre, Beaumont Close, Banbury, Oxon OX16 7RT.

Jumpy, jumpy lightweight run-of-the-mill budget stuff.

Program Microvalue Type
Arcade Compilation **Price** £3.99 **Supplier** Tynesoft, Addison Industrial Estate, Blaydon upon Tyne, Tyne & Wear NE21 4TE.

Electron

Program Microvalue Type
Arcade Compilation **Price** £3.99 **Supplier** Tynesoft, Addison Industrial Estate, Blaydon upon Tyne, Tyne & Wear NE21 4TE.

Program Sphere of Destiny
Type Arcade **Price** £7.95 **Supplier** Audiogenic, PO Box 88, Reading, Berkshire.

See BBC listing for comment.

PC and Compatibles

Program Imprint Type
Utility **Price** £9.95 **Supplier** The Electric Studio, 13 The Business Centre, Avenue One, Letchworth, Herts SG6 2HB.

Printer Utility Program written specifically for the PC 1512.

Spectrum

Program Bismarck Type
Arcade Strategy **Price** £9.95 **Supplier** PSS, Stoney Stanton Road, Coventry CV6 5DG.

Latest in line of the well received PSS wargames series. This one pits the might of the British Navy against the pride of the German Fleet, the Bismarck, as it attempts to break out from the Baltic and escape into the South Atlantic.

Program Express Raider
Type Arcade **Price** £8.99 **Supplier** US Gold, Units 2/3 Halford Way, Halford, Birmingham B6 7AX.

See Commodore 64 listing for comment.

Program Gauntlet - The Deeper Dungeons Type
Arcade **Price** £4.99 **Supplier** US Gold, Units 2/3 Halford Way, Halford, Birmingham B6 7AX.

See Commodore 64 listing for comment.

Program Ghosthunters Type
Arcade **Price** £1.99 **Supplier** Codemasters, 1 Beaumont Business Centre, Beaumont Close, Banbury, Oxon OX16 7RT.

Platforms and ladders action with a difference - with the fire button depressed you control an on-screen gun sight and can blow away the assorted spooks that drain your energy as you bob around a haunted house.

Two player option allows a friend to control it for you. Not bad.

Program Star Runner Type
Arcade **Price** £1.99 **Supplier** Codemasters, 1 Beaumont Business Centre, Beaumont Close, Banbury, Oxon OX16 7RT.

Quite topical really, with the London Marathon coming up - you play the Earth's competitor in the Intergalactic 2087 Olympics

version of the event. Simple controls played out in nice perspective 3-D - sounds a lot less tiring than the real thing too.

Program Super Robin Hood
Type Arcade **Price** £1.99 **Supplier** Codemasters, 1 Beaumont Business Centre, Beaumont Close, Banbury, Oxon OX16 7RT.

Feeling heroic? How about rescuing a fair maiden then? Whaddya mean there's something good on the telly?

Program Indoor Sports Type
Arcade **Price** £8.95 **Supplier** Advance Software, 17 Staple Tye, Harlow, Essex CM18 7LX.

Four very classy implementations (ten pin bowling, darts, table tennis, air hockey) all on the one tape. Great value, great stuff.

Program Microvalue Type
Arcade Compilation **Price** £3.99 **Supplier** Tynesoft, Addison Industrial Estate, Blaydon upon Tyne, Tyne & Wear NE21 4TE.

Iludes Ram Jam's yesterday hit, *Panzamide*, which alone makes this package well worth consideration.

Program Learn Chess Type
Obvious **Price** £6.95 (mail order) **Supplier** Coxsoft, 31 Fullwell Avenue, Barkingside, Ilford, Essex IG6 2HB.

Spectrum Plus 2/128K

Program Artist II - Special Version Type
Application **Price** £17.95 **Supplier** Softek, 36/38 Southampton Street, Covent Garden, London WC2E 7HE.

All the features of the existing *Artist II*, themselves very impressive, plus a separate program, *Page Maker*, that allows you to hold and edit eight screens of graphics and text in memory at the same time - roughly equivalent to a side of A4. Must be a contender if you are looking for an art package for your machine.

Farewell to the cassettes

I was pleasantly surprised to read in the 19th February issue of *Popular Computing Weekly* that Amstrad plans to launch a new version of the Spectrum with a built in disc drive. Not that I'd contemplate rushing out and buying one, not being into things Spectrummy (unless this meant Infocom Adventures became available) but that I believe, I sincerely hope, that this is the beginning of the end for the Cassette-Based Micro.

Cassettes. Yeuch! I remember on my old Tangerine system when I finally built and fitted the disc board how pleased I was that the machine was so much more powerful than it had been - after a while I was disconnecting the cassette leads, knowing I would never want to use them again.

And when I retired the Tangerine in favour of my Mandarin 68B09 Flex system, how I felt I had so much more power with the machine having a standard operating system instead of a hastily cobbled together Dos of the old Tangerine. It was also about that time when I said to myself I would never, ever, even consider a cassette based system.

I know this bit might get a few people out there baying for my blood, but I don't care. It's about time the micro-using people of this country got in line with the more enlightened micro users of the

States, where now for a long time the disc based system has been the norm, as opposed to the disgustingly backwards condition here, where they have been the exception. Disc drives *aren't* really all that expensive, and nor (maybe with the exception of the 3" ones) are the discs.

Kill the cassettes! Terminate the tapes! Cassette based micros nowadays are positively prehistoric, and it is really about time they were put out of their misery. No manufacturer in his right state of mind should even contemplate installing a cassette interface - luckily with the new breed of 16-biters like the ST and Amiga, a cassette interface would have been totally useless to anyone but a masochist.

Let's face the hard and cruel facts. Disc based systems are now coming to the prices which a few years ago would have only got you a primitive cassette based klunker. Who in a legal state of mind would prefer to wait several minutes for something to load as opposed to less than one? Also consider that with the speed of discs programs can be bigger, and much more complex, so the games freak can have bigger and better games than ever before, and the serious user can manipulate vast amounts of data which would be impossible on a mere cassette. Believe me, once you

get accustomed to the speed and flexibility of using disc drives, you wonder how crazy you must have been not to have gone disc sooner.

That brings me back to the subject, the Spectrum 128 +3, with its (hopefully) built in standard disc drive. Round of applause please for Alan Sugar, who has come round to, in one year of owning the Spectrum, what ol' Clive Sinclair never even dreamed of, being too preoccupied with those naff Microdrives (Pause while this chronicler stops laughing...)

To Alan Sugar I would like to say this: Be bold! Scrap the 128K +2 altogether, bring out a cheap add-on disc system for people with 128K's and +2's, sell the +3 at the same price the +2 currently sells for, and then actively encourage the development and sale of disc only software so that the new standard quickly catches on and there isn't a repeat of the 'Will there be any software for it' which haunted the original 128K machine. Go for it!

The Time Has Come... Hopefully by next year the idea of micro-computer with a long lead attaching it to a cassette recorder, or with a tape deck built in, will be as antique as the punched card, or ferrite core, to which I can only say, so long... good riddance, and no thanks for all the wasted time.

Anthony Shepherd

NEXT WEEK

Five years on

Next week, *Popular* is celebrating a special anniversary - our fifth birthday!

Yes, we'll be five years old (seems like decades, doesn't it?). So, in the best tradition of anniversaries, we'll be featuring some of the highlights of the issues down the years.

We're also going to celebrate by giving the magazine a new look - but don't worry, you'll recognise us on the newsstands.

So make sure you get a copy of an unusually festive issue of *Popular* (banners, crackers and silly string not included).

Laws of Computing

John Mawhood clears a path through the thorny question of copyright: piracy versus copying; copying versus backing-up... what the legal position really is.

Programming in C

Kenn Garroch begins a comprehensive series of articles on beginning, using and writing in C.
